

## 5.7 Classifying Two-Dimensional Figures

In this unit students

- understand attributes of and classify two-dimensional figures;
- graph points on the coordinate plane to solve real-world problems.

Students understand attributes of two-dimensional figures and use those attributes to classify figures. This builds on the work in Grade 4 with two-dimensional shapes and their characteristics. Students also learn how to graph points in the first quadrant in the coordinate plane and use that knowledge to solve real-world and mathematical problems.
