

MongoDB Enterprise Advanced Datasheet

MongoDB Enterprise Advanced is the best way to run MongoDB on your own infrastructure, providing a finely-tuned package of advanced software, support, certifications, and services. Thousands of organizations around the world use MongoDB Enterprise Advanced to accelerate time to value and better exploit data and technology for competitive advantage while reducing cost and risk.

What's Inside?

MongoDB Enterprise Advanced includes MongoDB Enterprise Server – the commercial edition of the MongoDB database – along with the most comprehensive support and the best SLA available when you run MongoDB yourself. You also get comprehensive operational tooling and security controls, advanced analytics and data visualization, platform integrations and certification, along with on-demand training for your teams.

- **Proactive Support.** MongoDB Enterprise Advanced provides access to proactive, consultative support from development to production. The same team that builds the database itself helps you throughout your entire application lifecycle. Customers can ask MongoDB experts an unlimited number of questions, 24 x 365, globally. Support also includes emergency patches for MongoDB.
- **Ops Manager** is the simplest way to run MongoDB on premises or in a private cloud, making it easy for operations teams to automate the deployment, monitoring and alerting, backup, and scaling of MongoDB. The capabilities of Ops Manager are also available in MongoDB Cloud Manager, delivered as SaaS in the cloud. Through Ops Manager, you can manage the complete lifecycle of your MongoDB databases via a powerful GUI, or programmatically with APIs to enable integration with your Infrastructure as a Code tools.
- **MongoDB Enterprise Operator for Kubernetes**, integrated with Ops Manager or Cloud Manager, gives you full control over your MongoDB deployment from a single Kubernetes control plane. It provides you with a consistent automation and management experience anywhere from on-premises infrastructure to the cloud.
- **Advanced Security** enables you to defend, detect, and control access to your data to meet security and compliance standards with Kerberos and LDAP access controls, automatic Client-Side Field Level Encryption, and comprehensive auditing. Enterprise Advanced builds upon the MongoDB server's comprehensive security framework – which includes Role-Based Access Control, PKI certificates, and TLS.
- **MongoDB Encrypted Storage Engine** provides native, at-rest encryption in storage and backups, eliminating the complexity and overhead of integrating third party disk and filesystem encryption options.
- **MongoDB In-Memory Storage Engine** delivers high throughput and predictable low latency for workloads with the most stringent response-time SLAs.
- **MongoDB Connector for BI** lets you use MongoDB as a data source for your existing SQL-based BI and analytics platforms such as Tableau, Microstrategy, Looker, and more.
- **MongoDB Compass**, the GUI for MongoDB, lets you explore and manipulate your data, visually create queries and aggregation pipelines and then export them as code to your app, view and create indexes, build schema validation rules and views, and more.

- **Enterprise Software Integration** ensures MongoDB Enterprise fits easily into your existing IT infrastructure and processes. SNMP support connects MongoDB Enterprise with your management and monitoring tools.
- **Commercial License** to meet the development and distribution needs of organizations that have policies requiring a license, including commercial distributors (OEMs) and MongoDB-as-a-service cloud providers.
- **Platform Certification** with MongoDB Enterprise tested and certified on all leading Linux distributions for x86, IBM POWER, and z Systems, as well as Windows
- **On-Demand Training** providing access to our online training, on your schedule and at your pace. Developers and ops teams can improve their MongoDB skills on demand from wherever they want, whenever it fits their schedule. Private training delivered on-site is also available.
- **Customer Success Program** offers an initial onboarding process, as well as multiple check-ins throughout the year to ensure your apps are running properly. We also keep you apprised of software updates, documentation, events, and webinars to ensure you have the resources you need to be successful.
