

## PROJECT SPOTLIGHT

APRIL 2018

## The Humboldt Recreation Center

Builder: Sande Construction

The Humboldt Recreation Center will house almost 71,000 sf of indoor recreation facility that will include a 200 meter spike-proof track, two racquetball courts, basketball courts & batting cages, an space for two wrestling practice mats, a large strength training area, various specialty fitness studios, and locker facilities. The donors specifically requested steel building construction, because of their familiarity with this product as well as the large open spaces it can provide.

ShakeoutPro® was utilized to stage this project more efficiently at the jobsite and thereby, accelerated the erection process. Requiring only your mobile device to operate - ShakeoutPro is Kirby's unique app, specifically developed to help Builders and Erectors save time receiving, unloading and staging steel at the job site.

Scheduled to open in December 2019, the Humboldt Recreation Center is intended to provide the entire community a year-round venue for fitness training and events that are often not possible in Iowa's climate.
