

level. These must be attributed, it would seem, to local and accidental causes,—to the violence or the persistence of winds, to the abundance or the force of certain currents of water."

*Ondatawawat*: the Ottawas (vol. xiv., note 9).

20 (p. 243).—Cf. descriptions of Canadian fauna given by Le Jeune (vol. vi., pp. 295–317), and Sagard (*Grand Voyage*, Tross ed., pp. 209–230).

21 (p. 245).—For value of the measure known as "palm," see vol. xxix., note 7. Martin says (*Bressany*, p. 69, note): "The Italian palm measured 8 pouces, 3 lines" of French measure,—equivalent to 8.8 inches, English measure; but this is considerably less than the value given by Littré.

22 (p. 247).—*Testone*: see vol. ix., note 39.

23 (p. 247).—*Canne*: a measure of length used in various countries, especially in Italy, the value of which is not constant; that of Naples is equivalent to two meters, twenty-nine centimeters.
