

of 12x60, 12x45 and 12x36 feet. All are about $3\frac{1}{2}$ feet high. The land here is nearly level, sloping slightly towards the south for several hundred feet to a small hill.

From this place we went south to White Potato lake, where we found an oval mound measuring 25 by 30 feet, and 4 feet high. It was located on the brow of a hill at an elevation of about 60 feet above the west shore of the lake, in Section 23. Here we also found a few small potsherds and chert and quartz flakes. A rude stemmed arrowpoint made of a material resembling rhyolite was also obtained.

Fig. 3

The thick growth of grass and underbrush rendered useless all attempts to discover additional traces of human occupation at this place. Marshy tracts of land lie in the rear of the elevated land upon which these indications were discovered.

On the farm of a Mr. Hensel, on the opposite (east) shore of the lake, indications of a village site were found. These were observed along the lake shore, on Lots 4 and 5, in Section 24. Among the camp refuse lying about on the soil were potsherds, and chert and quartz flakes and fragments. The potsherds are tempered with bits of crushed stone. One sherd shows traces of treatment with a cord-wound implement, the others collected are devoid of ornamentation. A triangular arrowpoint of light grayish chert and with serrated edges, a small leaf-shaped blank of gray chert, a small stone celt of ordinary form, and a small piece of mica were found on this site.
