

this road on the south side of which, not far from the cave, is a country school house known as the Muller District school.

The cave is on the eastern side of a much-eroded outcrop of weathered white and brown sandstone. It is about sixty-five or seventy feet above a small valley which separates this ridge from another wooded ridge a few hundred feet away on the east side of the valley. The ridge slope leading to the cave is quite steep and the climb to its mouth is made with some difficulty.

FIG. 3
Animal Figure, Indian Cave, Richland County.

The total length of the cave is 23 feet, its width at its arched entrance being $17\frac{1}{2}$ feet and its height $6\frac{1}{2}$ feet. Above the entrance the overlying sandstone is 2 feet thick. From its mouth the cave narrows gradually toward its southern end within 4 feet of which its width is 44 inches and its height 18 inches. At the middle of the cave, opposite the petroglyphs, the distance from the cave floor to the roof is about 40 inches. The width of the floor at this place is about 5 feet. The floor of the cave
