Hardened Enclosure

Enhance your security.

Protect your profits.

Encore® Encrypted Pulser

As technology gets more sophisticated, so do fuel thieves. The best way to protect your inventory and customers is to fight back with the Gilbarco Encrypted Pulser. Our Encrypted Pulser gives you an extra measure of protection and peace of mind while also easily integrating into your current Gilbarco pumps.

The Encrypted Pulser has several features that protect a key attack point for thieves that steal fuel at the dispenser:

- > **Encrypted Pulse Count:** The communication between the pump and pulser is encrypted for enhanced security.
- > **Lift-off Detection:** Lift-off detection provides enhanced security against unauthorized manipulation. Once the dispenser senses that the Encrypted Pulser has been lifted off the meter shaft, the fueling position is shutdown.
- > **Unique ID:** Each Encrypted Pulser has a unique ID and position that is recognized by the dispenser. Unauthorized pulsers cannot be inserted in place of the Encrypted Pulser without shutting down the fueling position.
- > **Hardened Enclosure:** The Encrypted Pulser has a hardened enclosure that prevents criminals from damaging the pulser shaft through the air gap or at the meter coupling.
- > **Technical Specifications:** Compatible with all Encore 500, Encore 500S and Encore 700S* standard flow dispenser models, the Secure Pulser is available for factory installation on new dispensers and as a retrofit. UL, CUL, Weights & Measurements, Canadian Weights & Measurements approved.
