

August 14, 2020

Helpful hint: Click on the hyperlinks for more detail.

Corn and soybean futures closed a little lower today while wheat closed higher. For the week corn, soybeans and wheat closed higher. There were additional new crop soybean sales reported in the daily export sales reporting system today which helped support prices. Higher forecast temperatures and little precipitation also added to support today. The unknown amount of lost production due to the [derecho storm](#) on Monday also added some support. There are a myriad of estimates as to the extent of crop damage but it's going to take a long time to get accurate estimates. The annual [ProFarmer crop tour](#) starts Monday and will be closely followed.

[US weather forecasts](#) for the next several weeks are looking on the drier and cooler side.

From StoneX Midday Commentary August 11, 2020

Monday's derecho storm continues to be the focus in the Midwest. The graphic below from the National Weather Service shows that the storm cluster started in southeast South Dakota and northeast Nebraska, traveling at an average speed of 55 miles per hour over the following 14 hours to run out of energy in western Ohio last night. Hurricane force winds were experienced in many areas of Iowa and in portions of the northern half of Illinois. The intensity of the wind seemed to ease as the storm spread south and east across Illinois and Indiana.

We're still running numbers on this storm, and it will be several weeks before we have a better feel for "average" yield loss. Every crop responds differently to these storms, depending on the timing, intensity and development stage. For now, a rough look at the numbers would suggest that yesterday's storm took between 2.5 bushels and 4.5 bushels per acre off the national yield potential. USDA will tell us tomorrow what it believes to be the potential of this year's corn crop. I do not expect its yield/production estimates to reflect the storm impacts. That's still too big of an unknown. This makes next week's Pro Farmer Midwest crop tour one of the most important in recent years, although it will still be too early to fully ascertain yield losses. The bottom line is that this storm was devastating to local farmers and grain companies that lost crops and facilities, but its impact was likely much smaller on the national balance sheet. It reduces the scope of the surplus corn, but we still see little evidence for a need to ration demand with higher prices.

Monday's Derecho traveled 770 miles, flattening crops along the way. SOURCE: National Weather Service
