Presents:

Silver's Comments

Helpful hint: Click on the hyperlinks for more detail.

It's been a good week for crop development but not so for prices. Grain futures closed lower today and for the week as prospects for large US corn and soybean crops pressured prices pushing corn contracts to new contract lows this week. Average estimates for next week's USDA Supply and Demand report were compiled by Bloomberg. They see corn yields of 180.5 bpa, and soybean yields at 51.2 bpa. Total corn production is estimated at 15,177 million bushels, soybeans 4,260 million bushels, and all wheat at 1,833 million bushels. Ending stocks for 2020/2021 are estimated at 2,824 million bushels for corn, 526 million for soybeans, and 948 million bushels of wheat. In the poll, world ending stocks were not expected to change much. Click for the [Crop condition report](#).

[US weather forecasts](#) are crop development friendly.

Corn Market Analysis by StoneX Group Inc - July 31, 2020

Corn export sales to China are hot, but the market response is not. What gives? The balance sheet below provides some insight. USDA's old- and new-crop balance sheets are in the first two columns. My current projections for old- and new-crop balance sheets come in the next two columns, followed by a bearish and bullish potential scenario. The primary variables I changed in the final three columns are yield and exports - the two biggest unknowns being discussed currently. My seasonally adjusted yield model currently puts the crop at 181.6 bushels per acre. Some analysts are much higher than that, so I threw in a 188.5 to represent a mid-point of some of those high-end estimates, while I currently see 174.5 bushels per acre as a mid-point for the low-end estimates, with August looking much cooler for grain fill than it did two weeks ago. All indications are that the surge in Chinese buying caught USDA WASDE off-guard, and it still needs to be factored into its balance sheet. It's policy has been not to factor in phase-one until there is evidence that China will follow-through, and that's what it's current balance sheet seems to reflect.

Average Cash Farm Price	\$3.61	\$3.35	\$3.58	\$3.23	\$2.95	\$3.75

Corn is the favored short currently among spreaders in the Ag sector, due much to the above perspective. There's still a lot of uncertainty revolving around escalating geo-political developments, the November elections, coronavirus and August weather. Traders feel most comfortable being bearish corn right now, while leaving the door open yet for August to cut soybean yields, while entertaining expectations for big soybean shipments this fall, with a tighter balance sheet than corn. Wheat sees demand on price breaks, but quickly gets over-priced on the world market on rallies. There's a lot of money in the system, adding to the volatility.
