Delivery Period: Buyers Call

Locations: Beardstown, Hardin & Granite City

**GMO seed testing
will be mandatory**

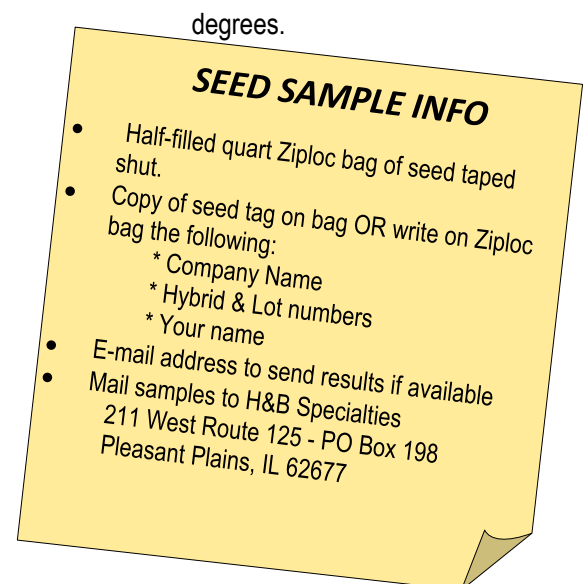

Non-GMO CORN PRODUCTION PROCEDURES

To meet the needs of the end users buying your corn, the following guidelines must be followed:

1. If the corn is planted on ground previously planted with corn it must be Non-GMO corn.
2. A minimum isolation distance of 60 feet or 24 rows from any GMO cornfields must be maintained.
3. Clean your planter out completely when switching to the Non-GMO corn for the H&B Specialties, Inc. contract.
4. Confirm all equipment used (planter, combine, auger wagon, augers, legs, bins, pits and trailers) is clean.
5. Spray for **Morning Glory** and **Horse Weed** (these seeds are a major problem for our buyer.)
6. A signed Grower Certificate verifying the identity of corn has been maintained from the field to the bin and to the elevator will be required at the time of delivery for each shipment.
7. Keep accurate records of where you plant all of your hybrids.
8. Provide a list of chemicals that have been applied to crop fields where corn is grown for H&B Specialties, Inc.
9. At harvest, fill your bin with only Non-GMO corn. DO NOT co-mingle with non-approved hybrids. Often we have requests for hybrid specific corn. If possible segregate hybrids by bin.
10. When drying corn, do not exceed maximum corn temperature of 100 degrees.
11. **STRESS CRACKS** need to be minimized to 10% or less during the drying process.

*** Please make sure trailers are cleaned out before hauling corn to H&B Specialties. If corn will be custom hauled, please ask truckers to have their trailers cleaned out.**
