## CUSTOM APPLICATION CUSTOMERS:

Butterfield & Associates Grain, Inc. is working to provide you with the best possible services in the right products and the right time.

With that theme in mind, we would like to remind you that post-applications of soybeans should be made approximately 21 days after planting. As we have been advocating the need to treat seeds, not weeds, in having clean soybean fields in any trait system that you choose.

The post-contact herbicide, along with the residual, are much more affective if applied at 21 days post-planting. Give us a call to schedule your post applications when planting, and we will put you on a schedule to scout or contact at 21 days.

With the hectic spring we are going to have, a step in the direction of being proactive will be beneficial to us both.

Thank you for your patronage and have a safe planting season.

*"Small enough to know you, large enough to serve you!"*
