URBAN AIR INITIATIVE

DO YOU KNOW WHAT'S
IN YOUR GAS?
BECAUSE IT'S HARMING
YOUR HEALTH

It's a problem that's too small to see,
but too big to ignore.
Every day, we breathe in harmful
emissions produced by our vehicles.

30%

20-30% of each gallon of gasoline you put in
your car is comprised of harmful aromatics
such as Benzene, Toluene, and Xylene.

These emissions cause heart disease,
cancer and are connected to issues
for our children like asthma
and even autism.

50%

Almost half of all Americans are exposed to
unhealthy levels of air pollution daily.

A majority of these emissions can be
avoided and our health improved by
changing the way gasoline is blended.

#FixOurFuel

Adding more ethanol to gasoline will
reduce the harmful aromatic compounds,
lowering tailpipe and greenhouse gas
emissions while improving air quality
and engine performance.

Help improve our air with ethanol.

IT'S OUR JOB TO CHOOSE
CLEAN AIR
LET'S TAKE A STAND &
MAKE A CHANGE

OUR MISSION

We are a non-profit organization dedicated to improving
air quality and protecting public health by reducing
vehicle emissions. We are focused on increasing the use of
clean burning ethanol in our gasoline supply to replace
harmful compounds in gasoline.

UAI is helping meet public policy goals to lower
emissions and reduce carbon in our environment through
scientific studies and real-world data to promote new
fuels, engine design, and public awareness.

30%

Research shows using a 15-30% blend of ethanol
has the greatest impact on reducing emissions with
little to no mileage loss.
