

MAG[®]

**Total Ice
and Dust
Control**

SAFER FOR THE ENVIRONMENT

**MAG Flakes
22.68 kg bags
sold at Holmes
Agro!**

How do Dust Suppressants work?

- Water absorbing dust suppressants work by attracting moisture from the air and then maintaining the moisture in the surface.
- The positive charges of the minerals attract the negative charges of water molecules.
- Resist evaporation while binding fine dust and aggregate particles together to keep surfaces stable and dust free

Applying MAG on indoor Arenas

- Grade indoor arena to no more than 2° slope
- Harrow surface prior to application
- Apply MAG at 1 KG per M2 (1 tonne per 1000 square meters)
- Re-harrow surface to ensure even distribution
- Allow 24 hours for MAG to absorb moisture and dissolve

****DO NOT WATER AFTER APPLICATION****

**High use Arenas should be done annually
depending on dust control**
