

# How Do I Control the Mouse in My House?

## Mice as Pests

Mice can be found in many areas, including inside the home or in the garage. These pests will gnaw on a variety of objects/surfaces, and seek many food sources including grass seed. Signs of mouse invasion include mouse droppings, nests and evidence of gnawing on materials such as wood, cables and foodstuffs.

## How Can I Control Them?

Bait stations are an effective method of controlling mice, as they attract mice with the scent of food and retain the mouse in station. Holmes Agro offers a product, Ramik Mouse Maze, that contains fish flavoured grains mixed with the active ingredient diphacinone (0.005%). These handy little stations can be used both indoors and outdoors, helping you get these pests under control!
