

2019 New Crop Futures Averaging Contract

Corn & Milo

Contact a Marketing Consultant at 888-848-9979

Offering a simple “No Fuss” way to capitalize on a historical trend!

The overall concept is that AgMark will price December corn futures at the close of the market every single day the markets are open in equal amounts from March 1, 2019 to June 28, 2019 (84 days). Producers can price any unpriced quantity they desire at any time before the ending date, during trading hours. The initial investment is a minimal fee of \$.02/bu. If at the end of the averaging period you elect to not set the basis there will be an additional fee of \$.03/bu.

Advantages

Minimum enrollment amount of 1,000 bushels.

Over the last 30 years the simple average in this time frame has outperformed harvest time prices **73%** of the time!

Producer has the FLEXIBILITY to price out the balance of the contract at any time during trading hours.

Turns a sometimes emotional decision (when to price) into a mechanical, mathematical strategy.

Enrollment for this program will end on February 26, 2019.

Disclaimer: While historical results do not guarantee future performance, history has shown that normally the average price of December corn futures from March to June tended to be higher than the price during harvest in October and November. This contract gives you an opportunity to potentially capitalize on this past market trend should it continue.
