

Offering Custom Diversity!

Besides standard marketing tools such as forward contracts and Delayed Pricing (DP), Legacy Farmers Cooperative offers a variety of **Legacy Next Level Grain Marketing** tools to help diversify risk. These strategies are completely customizable to any producer's goals. For additional information and a complete list of marketing tools, contact a Legacy Farmers Grain Marketer or Manager.

Option Features

Minimum Level

Allows farmers to establish a minimum price for their grain, while leaving upside potential. When entering into this contract you lock in a **floor price** by selling bushels and buying a *call option**. A producer who is anticipating a favorable market move but at the same time wants minimum price protection would use this feature.

Minimum/Maximum Level

This contract creates a minimum price for the producer but limits the upside potential to a predetermined **maximum** price. When setting your **floor price**, it will be at a reduced *premium* because you are buying a *put option** while also selling a *call option*. It is only available to producers who are comfortable with the possibility of delivering additional bushels should the short *call* feature be *exercised*.

*Option price contracts are made in 5000 bushel increments and a fee may apply.

Legacy Next Level Grain Marketing

Structured Features

Flex Level

Permits growers to set a minimum price and capture upside market movement. A **floor level** is set using a deferred futures month at a cost.**

Every week an equal quantity of bushels is priced. If the futures are above the **floor** upon close, bushels are priced at the futures. However, if the futures are below the **floor** at close, bushels are priced at the floor. To avoid DP storage farmers can combine this with a basis contract.

**Cost varies depending on the desired floor price.

Guaranteed Level Plus+

With this contract the farmer can sell bushels at a set price above current futures at no cost. There is however the potential for bushel double up.

Every week an equal quantity of contracted bushels is priced at a higher **Plus Level** as long as the futures price does not dip below a predetermined **Knock-Out Level**. If the futures market dips below the **Knock-Out Level** any remaining bushels not priced at the **Plus Level** will be priced at the **Floor Level**.

On the last pricing period day, if the futures close at/above the **Plus Level** and the **Knock-Out Level** hasn't been traded, then an additional quantity of bushels equal to the original (double up) will be contracted at the **Plus Level**. If futures are below the **Plus Level** this day, the double up feature expires.

Option Language

Long Option: The right, but not the obligation, to buy or sell a futures contract at a specific price with an expiration.

Short Option: The obligation, but not the right, to buy or sell a futures contract at a specific price with an expiration.

Strike Price: Price at which you long/short, or buy/sell respectively, the underlying futures contract.

Floor Price/Level: establishes a minimum futures price (strike price) that is guaranteed.

Option Premium: Cost of the option paid to seller.

Call Option: the right to buy a futures contract.

Put Option: the right to sell a futures contract.

Exercise: Converts the option into a futures position at the strike price.

Expiration: the last day on which an option can be exercised into the underlying futures contract. Beyond this point the option ceases to exist.

Intrinsic Value: Difference in strike price and futures price.

In-the-Money: A call or put that has intrinsic value. For a call futures price > strike price and for a put the opposite, futures price < strike price.

Out-of-the-Money: A call or put that does not have intrinsic value. For a call futures price < strike price while a put is out when futures price > strike price.

Time Value: Option premium less intrinsic value, reflects the amount of time remaining until expiration.
