

Lexar Installation Advantages

1) 4'x24' fan folded piece

- 3x the coverage of the typical 4'x8' sheet, meaning less time and effort on your part
- Fan folded into an easy to handle 4'x4' cube
- Only have to tape on the seams, so taping every 24 feet rather than every 8 feet

2) 6 mil vapor barrier

- Saves you from having to buy a separate vapor barrier
- Saves you the hassle and time spent having to install the separate vapor barrier
- Manufactured to fit, whereas installers could leave gaps if installing separately

3) Termite/Rodenticide already in the board

- Keeps insects, notably ants, from burrowing into the board, which kills the r value
- Not everyone has to spray for termites, but will save you time if you do have to
- Stops rodents from burrowing into board

4) 6 inch grid line

- Especially good when laying radiant tube heating projects
- Saves you time on measuring and marking on plumbing cuts
- Saves you time on rebar placement
