Mr. Tommy Colley
 State of Alabama
 Manufactured Housing Commission
 305 south Decatur Street
 Montgomery, Al. 36104

Dear Mr. Colley:

This information is being provided to you at the request of Oliver Technologies. The following paragraph is part of our current "Manufactured Home Installation Manual."

Normal Installations – The pier and ground anchor system described in this manual is the most common method to stabilize the home. Other systems (such as the Vector Dynamics Foundation System by Tie Down Engineering Inc. of Atlanta, Ga.) are approved when allowed by the authority having jurisdiction, when installed according to the system manufacture's instructions, and when certified by a registered professional engineer.

As the paragraph indicates, other systems are approved when they conform to the stipulated conditions. Other systems are not limited to Vector Dynamics, but must be:

1. Allowed by the authority having jurisdiction
2. Installed according to the system manufacture's instructions
3. Certified by a registered professional engineer of that state

It is our understanding that the Alabama Manufactured Housing Commission allows the use of Oliver Technologies, Inc. All Steel Foundation Systems. Therefore, **INDIES HOUSE** has approved the All Steel Foundation System Model 1100-IT "V" (lateral only bracing system) and Model 1100-I "V" (lateral and longitudinal bracing system) by Oliver Technologies, Inc. as an alternative tie down system for the installation of Indies House Manufactured Homes, subject to the (3) three requirements identified above.

Also, this system can be used on all used homes as well as new homes.

Sincerely,

Danny Galloway
