RE: Use of Oliver Technologies Foundation Systems

Dear Mr. Larson,

SEhomes recently added a statement in our printed Installation Manual that "...any commercial, proprietary foundation system may be used for support of our homes for gravity and/or wind loads providing such system(s) comply with all of the following:

1. Listed by a national recognized third-party
2. Evaluated and approved by a registered professional engineer or architect (any state)
3. The installation is performed in complete compliance with the foundation manufacturer's instructions."

Therefore I see no reason why your products would not be acceptable since all information I have seen on your products provide PE seals and third party testing / listing information.

If you need additional clarification for a particular jurisdiction, please let me know.

Sincerely,

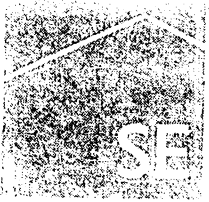

A handwritten signature in black ink that reads "Jim Bauer".
