Re: Adjustable Outrigger, Project #99-014-01

Dear Mr. Larson:

The Minnesota Building Codes and Standards Division has received and reviewed documentation submitted for adjustable outrigger by Oliver Technologies. Test documentation and test protocol indicate that the adjustable outrigger is acceptable for use as an alternate, under exterior door and window openings requiring perimeter blocking, (when required by manufacturers instructions). Oliver Technologies, Incorporated and their retail suppliers shall provide approved installation instructions to each consumer purchasing the adjustable outriggers (Listing #1055-11) for use within the State of Minnesota. The adjustable outrigger may only be used in accordance with their approved listing for use.

Respectfully,
Building Codes and Standards Division
