Climate Change Impacts in the United States

U.S. National Climate Assessment
U.S. Global Change Research Program
Members of the National Guard lay sandbags to protect against Missouri River flooding.

Energy choices will affect the amount of future climate change.

Climate change is contributing to an increase in wildfires across the U.S. West.

Solar power use is increasing and is part of the solution to climate change.

The colors on the map show temperature changes over the past 22 years (1991-2012) compared to the 1901-1960 average for the contiguous U.S., and to the 1951-1980 average for Alaska and Hawaii. The bars on the graph show the average temperature changes for the U.S. by decade for 1901-2012 (relative to the 1901-1960 average). The far right bar (2000s decade) includes 2011 and 2012. The period from 2001 to 2012 was warmer than any previous decade in every region. (Figure source: NOAA NCDC / CICS-NC).

Members of Congress:
On behalf of the National Science and Technology Council and the U.S. Global Change Research Program, we are pleased to transmit the report of the Third National Climate Assessment: Climate Change Impacts in the United States. As required by the Global Change Research Act of 1990, this report has collected, evaluated, and integrated observations and research on climate change in the United States. It focuses both on changes that are happening now and further changes that we can expect to see throughout this century.

This report is the result of a three-year analytical effort by a team of over 300 experts, overseen by a broadly constituted Federal Advisory Committee of 60 members. It was developed from information and analyses gathered in over 70 workshops and listening sessions held across the country. It was subjected to extensive review by the public and by scientific experts in and out of government, including a special panel of the National Research Council of the National Academy of Sciences. This process of unprecedented rigor and transparency was undertaken so that the findings of the National Climate Assessment would rest on the firmest possible base of expert judgment.

We gratefully acknowledge the authors, reviewers, and staff who have helped prepare this Third National Climate Assessment. Their work in assessing the rapid advances in our knowledge of climate science over the past several years has been outstanding. Their findings and key messages not only describe the current state of that science but also the current and future impacts of climate change on major U.S. regions and key sectors of the U.S. economy. This information establishes a strong base that government at all levels of U.S. society can use in responding to the twin challenges of changing our policies to mitigate further climate change and preparing for the consequences of the climate changes that can no longer be avoided. It is also an important scientific resource to empower communities, businesses, citizens, and decision makers with information they need to prepare for and build resilience to the impacts of climate change.

When President Obama launched his Climate Action Plan last year, he made clear that the essential information contained in this report would be used by the Executive Branch to underpin future policies and decisions to better understand and manage the risks of climate change. We strongly and respectfully urge others to do the same.

Sincerely,

Dr. John P. Holdren
Assistant to the President for Science and Technology
Director, Office of Science and Technology Policy
Executive Office of the President

Dr. Kathryn D. Sullivan
Under Secretary for Oceans and Atmosphere
NOAA Administrator
U.S. Department of Commerce
The National Climate Assessment assesses the science of climate change and its impacts across the United States, now and throughout this century. It documents climate change related impacts and responses for various sectors and regions, with the goal of better informing public and private decision-making at all levels.

A team of more than 300 experts (see page 98), guided by a 60-member National Climate Assessment and Development Advisory Committee (listed on page vi) produced the full report – the largest and most diverse team to produce a U.S. climate assessment. Stakeholders involved in the development of the assessment included decision-makers from the public and private sectors, resource and environmental managers, researchers, representatives from businesses and non-governmental organizations, and the general public. More than 70 workshops and listening sessions were held, and thousands of public and expert comments on the draft report provided additional input to the process.

The assessment draws from a large body of scientific peer-reviewed research, technical input reports, and other publicly available sources; all sources meet the standards of the Information Quality Act. The report was extensively reviewed by the public and experts, including a panel of the National Academy of Sciences, the 13 Federal agencies of the U.S. Global Change Research Program, and the Federal Committee on Environment, Natural Resources, and Sustainability.

The Highlights presents the major findings and selected highlights from Climate Change Impacts in the United States, the third National Climate Assessment.

The Highlights report is organized around the National Climate Assessment’s 12 Report Findings, which take an overarching view of the entire report and its 30 chapters. All material in the Highlights report is drawn from the full report. The Key Messages from each of the 30 report chapters appear in boxes throughout this document.

A 20-page Overview booklet is available online.

Designated Federal Officers
Cynthia J. Decker, NOAA
Kandis Y. Wyatt, NOAA

Federal Executive Team

John Holdren, Assistant to the President for Science and Technology and Director, White House Office of Science and Technology Policy
Katharine Jacobs, Director, National Climate Assessment, White House Office of Science and Technology Policy (through December 2013)
Thomas Armstrong, Director, U.S. Global Change Research Program National Coordination Office, White House Office of Science and Technology Policy
Thomas R. Karl, Chair, Subcommittee on Global Change Research, U.S. Department of Commerce

Tamara Dickinson, Principal Assistant Director for Environment and Energy, White House Office of Science and Technology Policy
Fabien Laurier, Director, Third National Climate Assessment, White House Office of Science and Technology Policy
Glynis C. Lough, NCA Chief of Staff, U.S. Global Change Research Program
David Easterling, NCA Technical Support Unit Director, NOAA NCDC
U.S. Department of Defense
William Goran, U.S. Army Corps of Engineers
John Hall, Office of the Secretary of Defense
Katherine Nixon, Navy Task Force Climate Change (from May 2013)
Courtney St. John, Navy Task Force Climate Change (through August 2012)

U.S. Department of Energy
Robert Vallario, Office of Science

U.S. Department of Health and Human Services
John Balbus, National Institutes of Health
Paul Schramm, Centers for Disease Control and Prevention (through July 2011)

U.S. Department of Homeland Security
Mike Kangor, Office of Policy (from November 2011)
John Laws, National Protection and Programs Directorate (from May 2013)

U.S. Department of the Interior
Susan Aragon-Long, U.S. Geological Survey
Virginia Burkett, U.S. Geological Survey
Leigh Welling, National Park Service (through May 2011)

U.S. Department of State
David Reidmiller, Bureau of Oceans and International Environmental & Scientific Affairs
Kenli Kim, Bureau of Oceans and International Environmental & Scientific Affairs (from February 2013)

U.S. Department of Transportation
Arthur Rypinski, Office of the Secretary
Mike Savonis, Federal Highway Administration (through March 2011)
AJ Singletary, Office of the Secretary (through August 2010)

U.S. Environmental Protection Agency
Rona Birnbaum, Office of Air and Radiation
Anne Grambsch, Office of Research and Development
Lesley Jantarasami, Office of Air and Radiation

White House Council on Environmental Quality
Jeff Peterson (through July 2013)
Jamie Pool (from February 2013)

White House Office of Management and Budget
Stuart Levenbach (through May 2012)

White House Office of Science and Technology Policy
Katharine Jacobs, Environment and Energy Division (through December 2013)
Fabien Laurier, Environment and Energy Division (from December 2013)
