

This document provides a technical overview of the Online Incentive Exchange (OIX)'s secure document storage and management system, which provides an end-to-end workflow solution for (i) storing credit documents related to privately managed credits and (ii) sharing of transactional related documents (i.e., diligence materials, purchase and sale agreements and signed closing docs) related to the exchange of tax credits between buyers and sellers on the OIX Marketplace.

The OIX has developed streamlined document workflows customized to the needs of the tax credit ecosystem on top of the industry leading, cloud-based document collaboration platform, Box ([www.box.com](http://www.box.com)). This technology integration provides OIX customers with top level document security, encryption and reliability while delivering an easy, yet powerful, document collaboration solution.

## Encryption In Transfer & At Rest

The OIX facilitates the uploading, storing, managing and sharing of documentation via a secure, encrypted environment. The OIX ensure the confidentiality and integrity of your files with encryption for content in transit and at rest:

- ✓ In transfer with high-grade TLS
- ✓ Multi-layered encryption at rest with 256-bit AES

## Cloud-Based with Enterprise-Grade Security

The OIX leverages Box's multiple data centers with reliable power sources and backup systems to offer 99.9% SLAs and redundancy. This infrastructure complies with industry standard security protocols and does not require your technical staff to perform any installation, maintenance or management.

## Secure & Easy to Use

The OIX is setting the standard in the tax credit space by making the storage management and sharing of tax related documents easy and secure.
