

Materials

Parts:

- Connector plate (2)
- Mounting brackets
- Vinyl Hinges
- Vinyl hinge connector

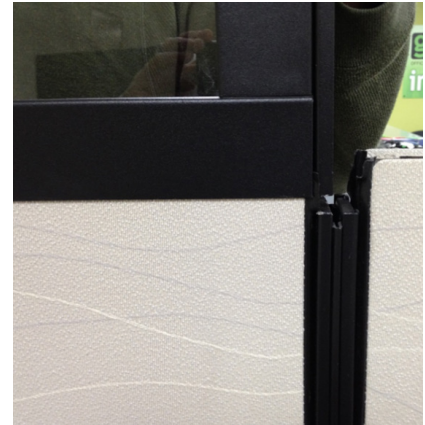

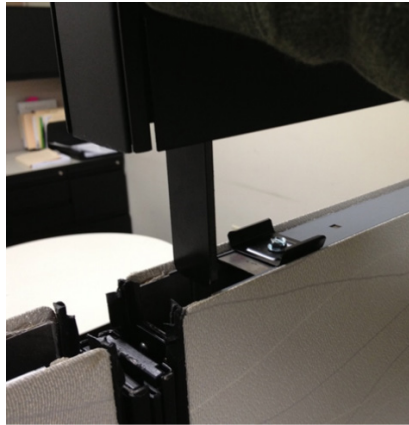

Step One

Remove all top caps (top cap retainer clips can remain on the panels).

Step Two

Install the panel stacker by aligning the mounting brackets over the panel frame opening on each side.

Step Three (In-Line Connection)

Having the connecting plate installed on the installed stacker, create an in-line connector by using one connector plate and two vinyl hinges.

Install the in-line connection plate on the next stacker by sliding over the clips and tapping it into place.

Step Four (Two-Way Connection)

To make a two-way connection use two connecting plates and one vinyl hinge connector. Install the two-way connection plate on the stacker by sliding over the clips and tapping in into place.

Install the second stacker in the two way connection, raise the second connector plate up to align with the clips on the side of the stackers. Then tap the connector plate to lock it in place.

Step Five (Varying Height Connection)

To create a varying height connection build the standard panel connections and add the stacker bracket and vinyl hinge.

Install the stacker, raise the stacker bracket, and tap into place.
