

Materials

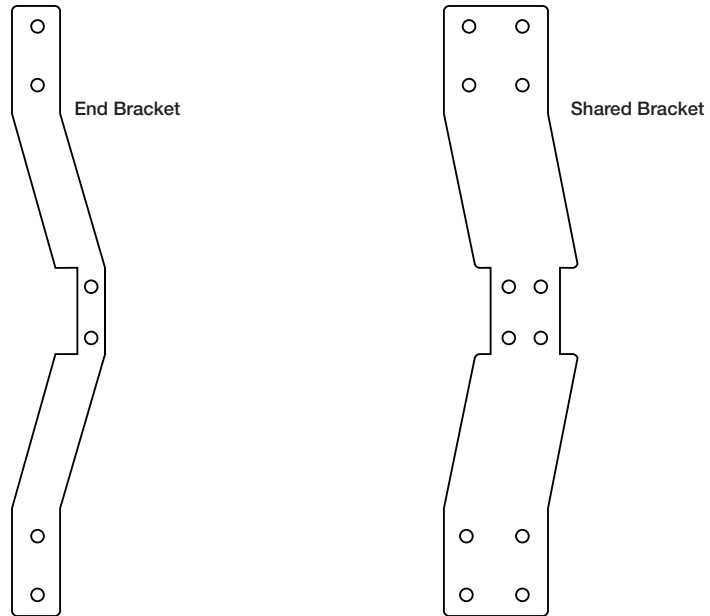

There are 2 types of brackets, an end bracket and a shared bracket.

The end brackets are universal, right and left, by simply turning the bracket to the proper side.

Shared brackets are used for seams or middle support on a long transaction top.

Overview

Each bracket replaces the pork chop connector that would normally be used to connect panels. Attach bracket to panel with porkchop screws. Use wood screws to attach transaction top to the bracket.

Examples of properly installed brackets:
