EQ2, LLC Announces New Products for its HEMS CMMS Ahead of the AAMI Exchange Conference

Charlotte, NC - EQ2’s focus in 2019 is to continue to innovate CMMS products that make it easier for hospitals to maintain compliance and a safe environment of care, while improving efficiencies. At the AAMI Exchange June 7 – 9, 2019 the company’s latest innovations will be demonstrated at booth #1116:

- **New Features for the HEMS Remote mobile app:** this next generation mobile app works in both online and offline mode with interactive dashboards, and smart phone features of speech to text, barcode scanning, and photo taking.

- **Performance and Benchmarking Analyzer:** robust dashboards and reports benchmark critical KPI’s and highlight areas for improvement. As improvement trends emerge, the value-add from Biomed, Imaging, Facilities, Support Services, etc. are quantified for all to see.

- **Total Asset Management:** expanded functionality for Biomed, Facilities, Supply Chain, Procurement, Receiving, Materials Handling, Service Contracts and Vendor Management allows assets and contracts to be tracked and monitored from purchase requisition to end of life.

- **FASTKEY™** is a new software offering to track and control keys and access card management in hospitals. The easy to use interface tracks keys based on employee and contractor assignments and due dates. Alerts are sent on overdue keys. Key assignments can be seen by maps of floors, specific areas, rooms, or even spaces within a room. High risk areas may be searched for a history of who has had access to the area.

About EQ2

HEMS was developed at the University of Vermont in 1983 as a collaborative effort of the University of Vermont, ASHE (American Society of Healthcare Engineering), and the Kellogg Foundation. In 1993, EQ2 was created to commercialize HEMS and all of its associated products. EQ2 has offices in Charlotte, NC and Camarillo, CA. See [www.eq2llc.com](http://www.eq2llc.com) for more info.
