

FOR IMMEDIATE RELEASE

**Phoenix Data Systems, Inc. and oneSOURCE Document Site
Announce New Technology Partnership**

Companies to offer Demonstration Webinar on the Interface on May 8, 2018

Salt Lake City, UT, May 3, 2018 — Two companies that help facilities achieve operational mandates within different operational areas have integrated their respective online tools to deliver a powerful, comprehensive solution that will help healthcare facilities operate in accordance with best practices and regulatory standards.

oneSOURCE Document Site manages the most comprehensive online database of Biomedical Maintenance and Service preventive maintenance (PM) documents.

Phoenix Data Systems proudly offers the AIMS® Software that allows users access to essential, up-to-date document retrieval quickly and easily. AIMS is the preferred Computerized Maintenance Management System (CMMS) solution for managing assets, facilities, and maintenance operations for healthcare organizations. The computer software is designed to simplify maintenance management.

“The AIMS/oneSOURCE interface creates a single environment for all documentation needs,” states Heather Thomas, CMO, VP of Sales and Marketing for oneSOURCE. “Now, through the AIMS Software, Healthcare Technology Managers can better manage their Preventive Maintenance programs with access to Biomedical Maintenance and Service Manuals, including end of life documentation for obsolete items, found on oneSOURCE.”

The two companies will offer a demonstration webinar on the new interface. The AIMS/oneSOURCE Demonstration Webinar will be held May 8, 2018; 9 am PST, 10 am MDT, 11 am CST, 12 pm EST.

Healthcare facilities must comply with evolving operational mandates from the CMS, the Joint Commission, and other regulatory/accreditation bodies. Not only must they be in compliance, they have to document performance levels.

About oneSOURCE

With oneSOURCE document site, www.onesourcedocs.com, healthcare facilities gain access to an online, electronic binder of manufacturers' validated instruction for use documents. A search engine provides multiple paths, i.e., general model number, manufacturer, key word to all needed documents and manuals. oneSOURCE Document Site's Biomedical Database of manufacturers' maintenance and service manuals for preventive maintenance of equipment helps HTMs prepare for CMS accreditation requirements.

About Phoenix Data Systems, Inc.

Phoenix is the trusted provider of the CMMS software, AIMS, for thousands of users around the world. Phoenix was formed in the early days of specialized software based on the urgent need for Michigan Hospitals to have a modern maintenance work order system. In 1984, after two years of design and development, the first AIMS system was delivered to eight Michigan hospitals. Today, AIMS is used in 3,000 facilities in 18 countries. Phoenix is now developing its fifth platform change and designing software to carry AIMS users well into the early 2020's and beyond. For more information, visit www.goaims.com.
