

For our office in Munich we are looking for a

Ruby/JavaScript Developer

We at riskmethods help companies understand and mitigate risks in their supply chain. We are a SaaS company with an innovative data-driven service to help reduce supply chain disruptions due to natural disasters, sanctions, bankruptcy and many other causes, and create visibility for the eco-friendliness and sustainable production policies of companies around the globe. We are a startup with solid finances, a great product at the right time and an excellent growth trajectory. Also, we're a great team – you should join us!

We are currently looking for an experienced Ruby developer with great skills in:

- Ruby & Ruby on Rails
- JavaScript & Backbone.js
- PostgreSQL

Ideally you have a Master in Computer Science or a related discipline, and experience in building web-based products and services in a B2B environment.

It would be nice if you are familiar with some of the following topics:

- ElasticSearch
- JS frameworks other than Backbone
- Rails Scaling & Performance
- Network Modeling
- User Interface Design

From day one, you would work on features that are directly visible to our customers, and would help make our product even better. You would contribute your own ideas to a unique product that is much more than the next shoe-shop/photo-sharing app.

Aside from technical skills, we are looking for a positive, can-do mentality, someone who enjoys working in a start-up. We are looking for people that we can trust to organize their work as they see fit, using the tools they prefer. English is a must, German a big plus. You should be based in beautiful Munich or be willing to relocate.

We offer a stimulating, fast-paced and fun environment with flat hierarchies and steep learning curves. Get on board!
