

# Don't slip up. Correct floor mats help ensure your safety.

Scion/Toyota floor mats (both the carpet and all weather floor mats), for driver safety and convenience, are designed to securely fit your specific Scion/Toyota model. Scion/Toyota does not recommend using incompatible after market floor mats or an incorrect Scion/Toyota mat that does not properly match the size and space on the driver's floor or is not intended to be used in your specific model. Also, if the floor mat in the driver's position cannot be secured using the retaining hooks or clips provided, it could move forward and interfere with the operation of the pedals.

## Proper floor mats

Use either the Scion/Toyota carpeted floor mat or the all weather floor mat designed for your model. It was designed to avoid interference with the pedals when properly installed.

## Use only one mat

Never stack floor mats. Only **ONE** compatible floor mat should be installed in the driver's position at a time with the correct side facing up.

## Make sure your Scion/Toyota mats are properly installed

To avoid the floor mat slipping forward and interfering with the pedals, make sure your Scion/Toyota floor mat is properly secured using the retaining clips provided.

## Remember to check the floor mat in the driver's position to ensure it is properly installed and secured.
