

Default Domain Name Server Records (Zone File)

This tutorial provides the default records for domains registered in Hover, just in case you changed your settings and need to revert back to our system defaults.

Please note that your domain name needs to be pointed at ns1.hover.com and ns2.hover.com in the Name Servers under the Account tab in Hover for these records to take affect.

Default DNS Records

When a domain name is registered in Hover the DNS records below are created by default. Changing these records can negatively impact the services that rely on your domain settings, such as domain forwarding, e-mail, Web Mail, and your Hovers.

Please note that TLD is an acronym for top-level domain. Examples of top-level domains are .com, .net, .org, .info, and .biz.

A Records:

yourdomainname.tld -> 64.99.80.30
*.yourdomainname.tld -> 64.99.80.30

CNAME Records:

mail.yourdomainname.tld -> mail.hover.com.cust.hostedemail.com

MX Record:

mx.hover.com.cust.hostedemail.com

Restore Default DNS Records

Create A Record

Hostname  .awesomesnowremoval.com

Help [Reset to Default](#)

Host	Records
@	A <input type="text" value="67.220.194.133"/> <input type="button" value="Update"/> 
	MX <input type="text" value="10"/> <input type="text" value="mx.hover.com.cust.hostedem"/> <input type="button" value="Update"/> 
	MX <input type="text" value="0"/> <input type="text" value="mail.awesomesnowremoval.c"/> <input type="button" value="Update"/> 
	TXT <input type="text" value="printer=lpr5"/> <input type="button" value="Update"/> 
*	A <input type="text" value="67.220.194.133"/> <input type="button" value="Update"/> 

If you have modified your DNS records and need to revert back to Hover's default DNS records click on **Reset to Default** in the Manage DNS section.

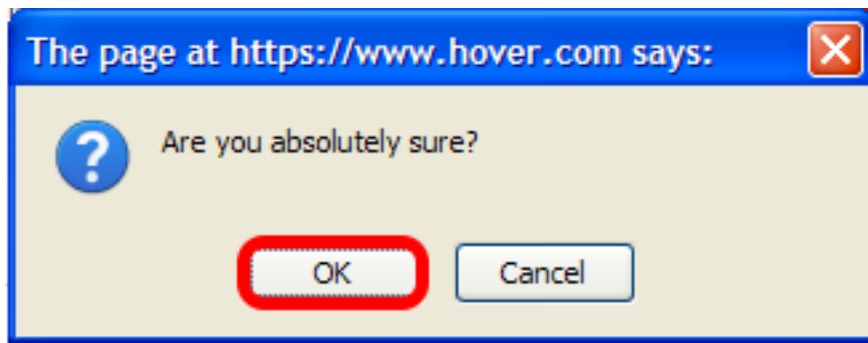

Reset DNS to Default

This action is **irreversible** and your original DNS settings will be **permanently erased**. We strongly recommend that you print out or otherwise record your current settings before resetting to Hover defaults. Click **Proceed** to reset your DNS settings.

Cancel

Proceed

Click **Proceed**.

Click **OK**.

Example of Default Records

[Help](#) | [Reset to Default](#)

Host	Records
@	A <input type="text" value="64.99.80.30"/> <input type="button" value="Update"/> <input type="button" value="x"/>
	MX <input type="text" value="10"/> <input type="text" value="mx.hover.com.cust.hostedem"/> <input type="button" value="Update"/> <input type="button" value="x"/>
*	A <input type="text" value="64.99.80.30"/> <input type="button" value="Update"/> <input type="button" value="x"/>
mail	CNAME <input type="text" value="mail.hover.com.cust.hostedemail.cor"/> <input type="button" value="Update"/> <input type="button" value="x"/>

The records in the screenshot above are the default records for any new domains that are registered through Hover.
