

Use Hover Email From Anywhere

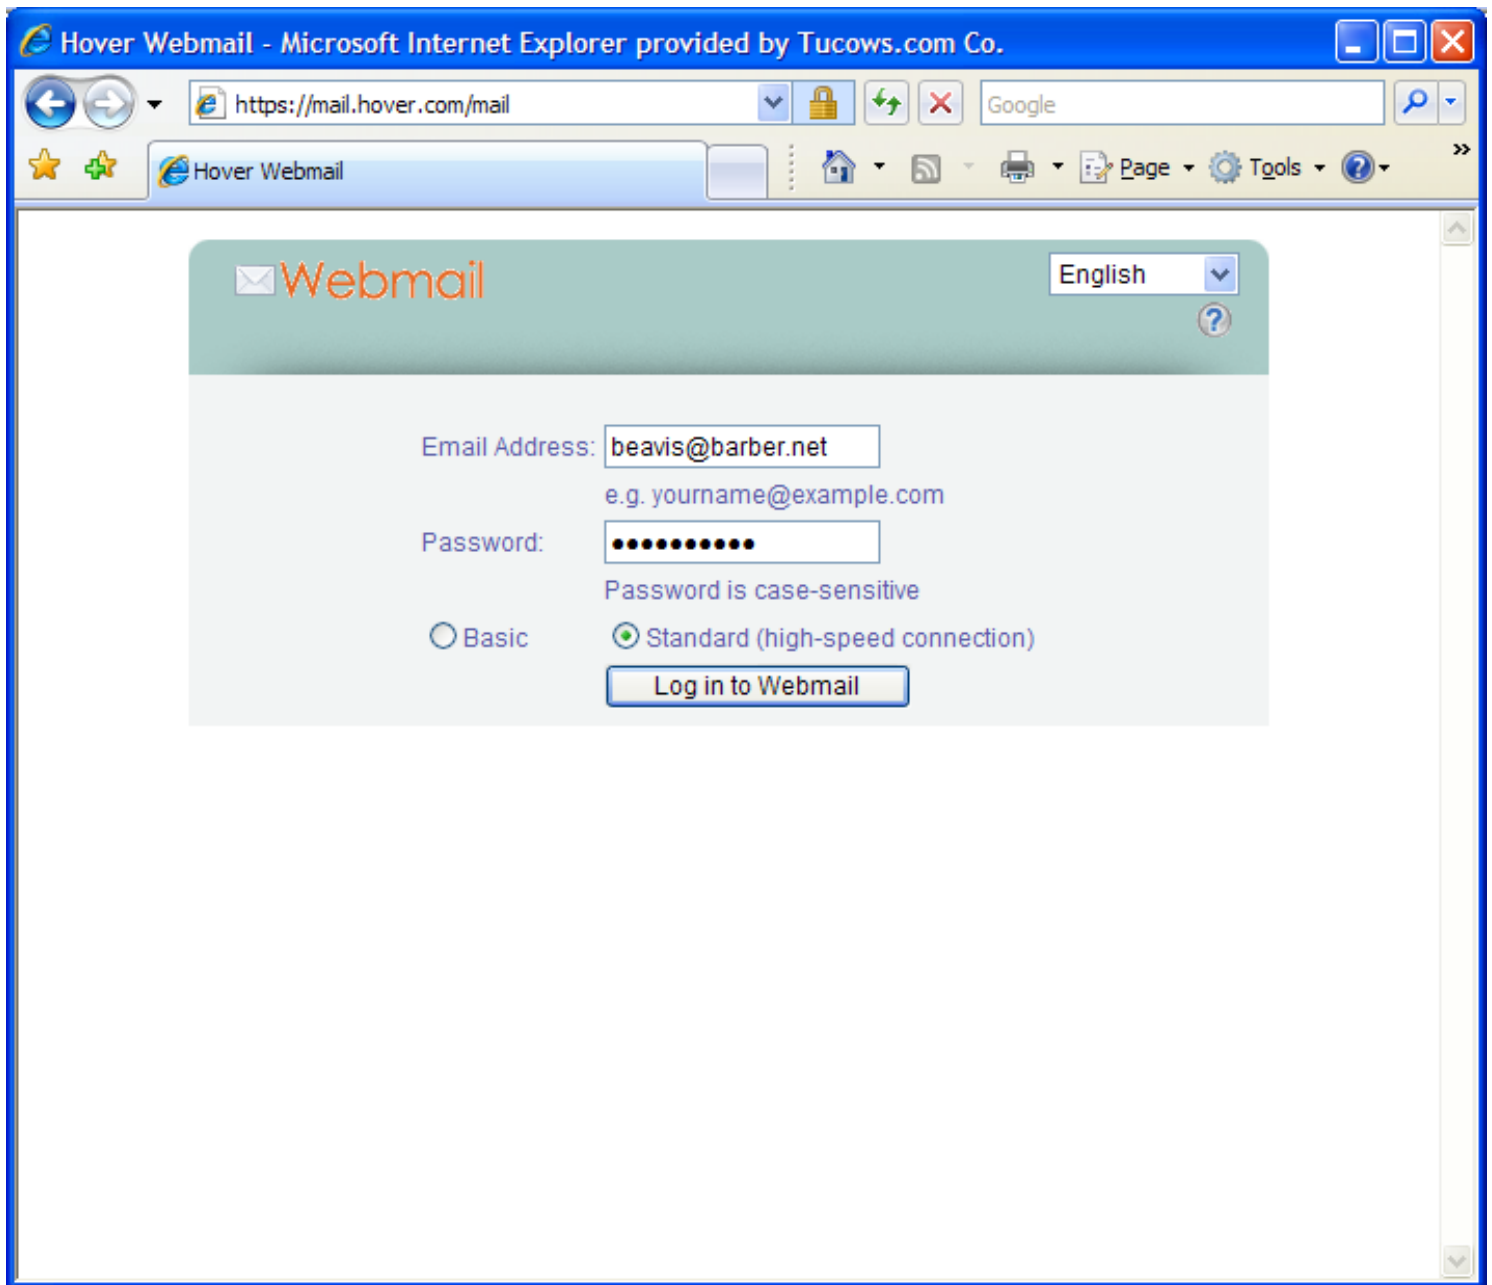

Hover's webmail system makes it easy to check your email when you aren't at your home computer.

Load mail.hover.com

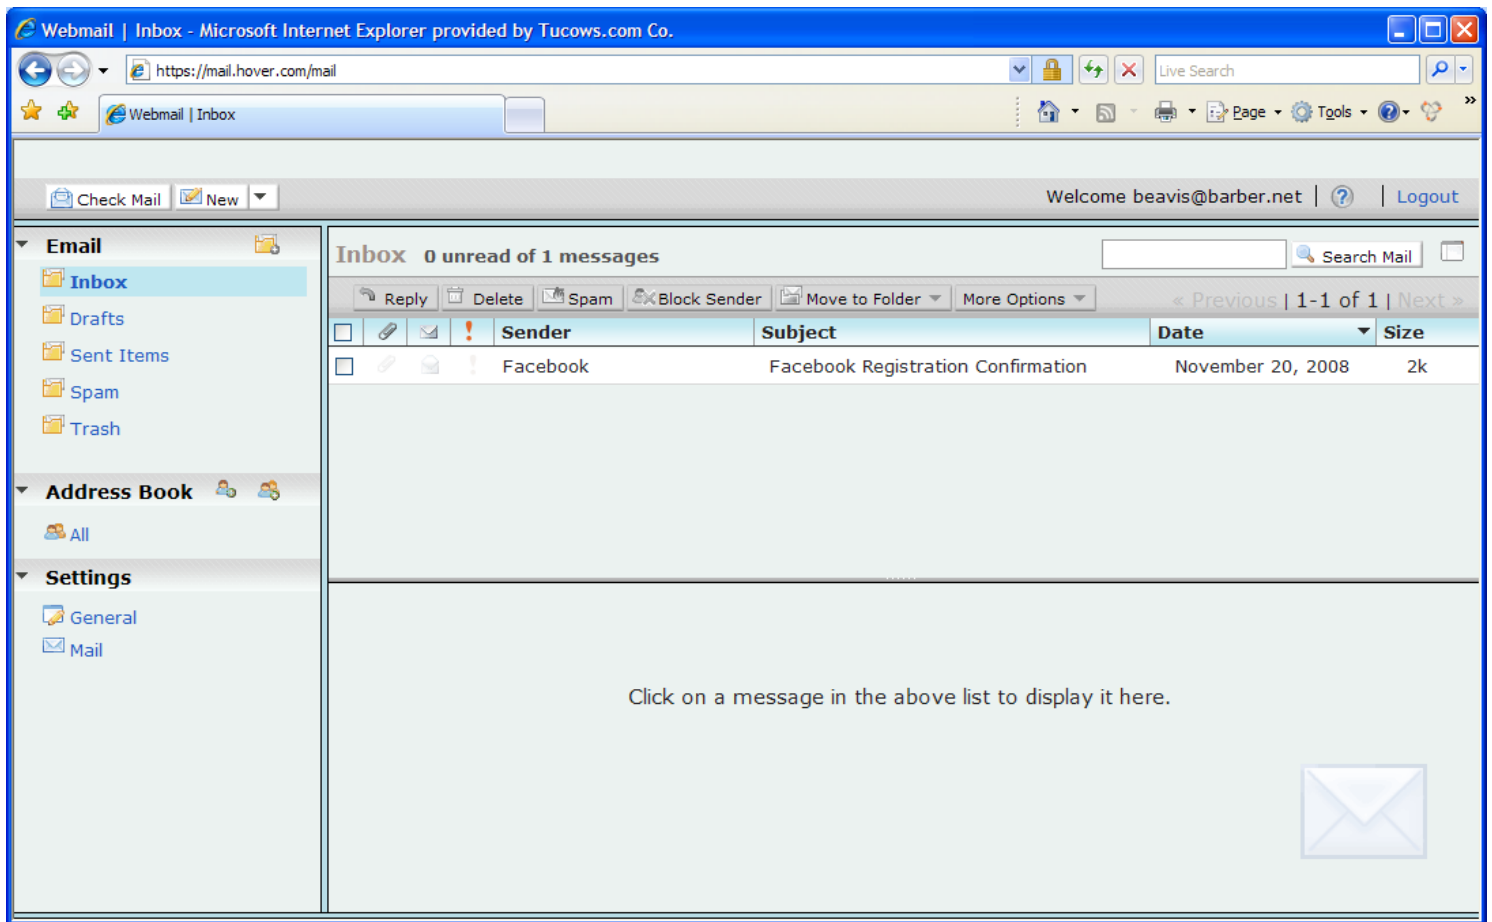

Enter mail.hover.com in the browser address bar and hit enter.

Log Into Web Mail

The screenshot shows a Microsoft Internet Explorer browser window with the title "Hover Webmail - Microsoft Internet Explorer provided by Tucows.com Co.". The address bar displays "https://mail.hover.com/mail". The page content includes a "Webmail" header with a language dropdown set to "English". Below the header, there are input fields for "Email Address" (containing "beavis@barber.net") and "Password" (masked with dots). A note states "Password is case-sensitive". There are two radio buttons for connection types: "Basic" and "Standard (high-speed connection)", with "Standard" selected. A "Log in to Webmail" button is positioned at the bottom of the form.

Enter your full email address and password then click on Log in to Webmail. If you are on a slower computer or a low speed Internet connection choose the Basic interface for better performance.

The webmail Inbox will display any messages saved on our server. If you access your e-mail using POP3 from a computer program on your home computer, such as Windows Mail or Outlook, messages on your home computer will not appear in webmail unless you have configured your email software to save copies of messages on our server.
