

Email Server Settings

This tutorial provides Hover's email server settings. If you are looking for step-by-step instructions to configure a specific email program [click here](#).

Hover uses the following server names:

Incoming mail server: mail.hover.com

Outgoing mail server: mail.hover.com

Username: Your full email address in lowercase letters

Ports (if SSL is enabled):

Incoming Port Number : 993 for IMAP and 995 for POP3

Outgoing Port Number : Either of the following are can be used: 25 (default) or 465

Ports (if SSL is not enabled):

Incoming Port Number : 143 for IMAP and 110 for POP3

Outgoing Port Number : Any of the following are can be used: 25 (default), 587, or 8025

Our outgoing mail server requires authentication (password authentication, do not select MD5-Challenge if that is an option). The username to log into the outgoing mail server is your full Hover email address, and the password is the same password that you use for incoming mail.

Login Authentication: Do not turn on SPA (Secure Password Authentication) in your email software.
