

E-Rate Q and A:

1. Is there a specific runtime requirement in the event of a power failure? NO
2. Power distribution required/Outlets required? It will depend on the UPS.
3. On the Firewall Unit, do you have an existing unit you're replacing? We do not have an existing unit.
4. On the IDF data cabling and move: Do existing data cabling drops have enough service loop for this move or are we installing all new drops to the new location? We will be installing new drops.
5. On the fiber, does it have enough of a service loop for the move or are we running a line or just splicing this one to make it long enough for this new location? I believe it has enough service loop.
6. Last question – can we schedule a walk through with you to look at the IDF move and what that would entail as well as your current firewall unit? Yes, anytime between Jan 7 and Jan 18, 2019
