

Biography of Bradley Varhol, EON Products, Inc.

Bradley Varhol is the founder and Owner of EON Products, Inc., a high service provider of instruments and supplies for industrial and environmental sampling, measuring and monitoring, since 1995. The company currently employs 13 people and manufactures, distributes and rents a wide variety of testing equipment.

EON has been an exclusive representative of instrumentation for identifying metal alloys since 1996, providing industry with information and training on the use of these instruments for scrap separation, quality assurance in manufacturing, and Positive Materials Identification in a wide variety of industries including power generation, automotive, petrochemical and many others. In 2010 EON successfully opened the only manufacturer certified third party XRF repair facility in the United States, offering regional customers quick turn around and value added services.

In 2015 EON joined the Sciaps team providing hand-held instrumentation for identifying materials using X-ray fluorescence (XRF), Raman Spectroscopy, and Laser Induced Breakdown Spectroscopy (LIBS).

Brad holds three patents for environmental products for groundwater sampling, is a past member of the Interstate Technology Regulatory Commission (ITRC), and spent four years on the faculty of the Nielsen Environmental Field School. His current mission is promoting and explaining the capability and uses for XRF and LIBS analyzers.
