

Instead of  
waiting **in line**,  
why aren't  
your students  
**on-line?**

FairChoice Systems web-enables the onboarding process for colleges and universities. Our proven approach helps institutions migrate from paper to the web at a fraction of the cost of other solutions.

## The Vision

College administrators are under increasing pressure to improve service quality while controlling cost. Web-enablement of paper-based processes can make both goals possible: students enjoy 24/7 access to campus services while administrators improve their ability to target resources where they are needed most.

## The Challenge

Until now, the higher education community has lacked appropriate solutions for the web-enablement of onboarding processes, including housing selection, health service enrollment, and student advising. The migration of paperwork to the web has meant replacing legacy systems or building a web presence from scratch. Either approach is costly and disruptive.

## The Solution

FairChoice Systems is introducing an on-line service that allows schools to migrate their onboarding processes from paper to the web. Unlike other solutions, FairChoice leverages an institution's existing investments by integrating with — rather than replacing — legacy data systems. FairChoice can eliminate student paperwork at a fraction of the time and cost required by other solutions. The result is a secure, low-cost, student-centered, real-time service infrastructure.
