

LIPOTROPIC ADJUNCT™

Many factors determine the health of your heart and blood vessels, especially a balanced diet low in fat and high in fiber. Sometimes we don't eat the foods that give us the nutrients we need for optimal cardiovascular health. These nutrients include lipotropic factors and B-vitamins. Lipotropic factors help keep lipids (fats) emulsified in blood, so they may be mobilized and utilized throughout the body where needed. B-vitamins help assure proper metabolism of homocysteine. Leading-edge Lipotropic Adjunct™ provides nutrients shown to play essential roles in maintaining the health of the circulatory system.*

#3510, 180 Tablets

Why Lipotropic Factors and B-Vitamins?

- **Lipotropic factors** are essential for the production of lipoproteins, which help keep lipids emulsified in the bloodstream.*
- **B-vitamins help assure proper metabolism of homocysteine**, a natural metabolic by-product that can irritate blood vessels if levels are elevated.

Our Solution: Lipotropic Adjunct

- **Concentrated lipotropic factors** (choline and inositol) assist the mobilization and utilization of dietary fats.
- **Contains folic acid, vitamin B₆, and vitamin B₁₂**, nutrients known to lower blood levels of homocysteine, an amino acid that can accumulate to dangerous levels and damage blood vessels.
- **Betaine hydrochloride** helps create an environment conducive to vitamin B₁₂ absorption. Betaine is itself involved in homocysteine metabolism.
- **Citrus bioflavonoids, including hesperidin**, support the health of the circulatory system.*

SUGGESTED USE: 2 to 4 tablets daily.

Supplement Facts		
Serving Size: 4 Tablets		Servings Per Container: 45
	Amount Per Serving	% Daily Value
Vitamin B ₆ (as pyridoxine hydrochloride)	8 mg	400%
Folic acid	600 mcg	150%
Vitamin B ₁₂ (as cyanocobalamin)	100 mcg	1666%
Choline bitartrate	200 mg	†
Inositol	200 mg	†
Betaine hydrochloride	200 mg	†
Lemon bioflavonoids	100 mg	†
Hesperidin	100 mg	†
† Daily Value not established		

OTHER INGREDIENTS: Calcium carbonate, glucose, microcrystalline cellulose, stearic acid, silicon dioxide, magnesium stearate, hydroxypropyl methylcellulose, titanium dioxide, glycerin, sodium starch glycolate, vanillin and carmine.

Lipotropic factors, choline and inositol help keep lipids (fats) emulsified in the bloodstream and help reduce the buildup of unwanted fat in the liver. Folic acid, B₆ and B₁₂ promote proper metabolism of homocysteine, which supports a healthy antioxidant response to LDL cholesterol, free flowing circulation and overall arterial wall health.*

Betaine hydrochloride works in conjunction with B₁₂, hesperidin and bioflavonoids support overall product effectiveness.

Store in a cool, dry place, away from direct sunlight.

Packaged with safety seal.

LIPOTROPIC ADJUNCT™

Hay muchos factores que determinan la salud de su corazón y sus vasos sanguíneos, especialmente una dieta balanceada baja en grasas y alta en fibra. A veces no comemos los alimentos que nos proporcionan los nutrientes que necesitamos para una salud cardiovascular óptima. Estos nutrientes incluyen factores lipotrópicos y vitaminas B. Los factores lipotrópicos ayudan a mantener los lípidos (grasas) emulsionados en la sangre, por lo que éstos pueden ser movilizados y utilizados en todo el cuerpo cuando sea necesario. Las vitaminas B ayudan a asegurar un correcto metabolismo de la homocisteína. Lipotropic Adjunct™ es un producto de vanguardia que proporciona nutrientes que de manera comprobada desempeñan funciones esenciales en el mantenimiento de la salud del sistema circulatorio.*

¿Por qué son necesarios los factores lipotrópicos y las vitaminas B?

- Los factores lipotrópicos son esenciales para la producción de lipoproteínas, que ayudan a mantener los lípidos en el torrente sanguíneo en una forma emulsionada.*
- Las vitaminas B ayudan a garantizar el metabolismo apropiado de la homocisteína, un bi-producto metabólico natural que podría irritar los vasos sanguíneos si se elevan su nivel.

Nuestra Solución: Lipotropic Adjunct

- Los factores lipotrópicos concentrados (colina e inositol) ayudan a la movilización y utilización de las grasas de la dieta.
- Contiene ácido fólico, vitamina B₆ y vitamina B₁₂, nutrientes que son conocidos por su habilidad para bajar los niveles sanguíneos de homocisteína, un aminoácido que se puede acumular en niveles peligrosos y dañar los vasos sanguíneos.
- El hidrocloreto de betaina ayuda a crear un ambiente propicio para la absorción de la vitamina B₁₂. La propia betaina está involucrada en el metabolismo de la homocisteína.
- Bioflavonoides de cítricos, incluyendo la hesperidina, apoyan la salud del sistema circulatorio.
