

The quality of the Standard American Diet (S.A.D.), often referred to as the Western diet, has dramatically declined in recent years. We are no longer getting the right balance of macronutrients (protein, fat and carbohydrate), micronutrients (vitamins and minerals), nor the fiber, phytonutrients, and antioxidants our bodies need everyday to maintain and promote health. For example, although we are getting more than enough protein in our diets, we are getting it from animal and dairy products which are laden with fat and cholesterol. Studies have shown that poor diet is strongly associated with poor health. Along with a sedentary lifestyle, this has played a role in leading to the high incidence of malnutrition, weight gain, and chronic diseases.

NEOLIFESHAKE

La calidad de la Dieta Americana Estándar (S.A.D) a la que comúnmente nos referimos como “la dieta Occidental” ha decaído drásticamente en los últimos años. Ya no recibimos el equilibrio adecuado de macronutrientes (proteínas, grasas y carbohidratos), micronutrientes (vitaminas y minerales), ni la fibra, fitonutrientes y antioxidantes que nuestro cuerpo necesita todos los días para mantener y promover nuestra salud. Por ejemplo, a pesar de que recibimos más que suficiente proteína en nuestras dietas, proviene de animales y productos lácteos colmados de grasa y colesterol. Estudios han demostrado que una dieta pobre está fuertemente relacionada con una salud pobre. Junto con el sedentarismo todo esto ha jugado un papel importante en la alta incidencia de desnutrición, aumento de peso y las enfermedades crónicas.
