

Dosage Recommendations: Use 1 to 3 scoops. Dosage depends entirely on the degree of soiling and the size of the wash load.

Heavily soiled wash would require higher dosage levels.

Under dosing can cause greying of the washing.

Always sort the laundry according to type of material.

Do not mix white and coloured textiles during washing.

Because of the effectiveness of G1, most washing can be done at 40°C temperature. For more soiled wash, Golden's Oxygen Bleach can be added. Stains can be pretreated with Golden's Super 10.

When washing by hand and soaking, always dissolve the laundry compound in cool water before the textiles are placed in the water. Ideally water temperature should then be raised to 40°C. Undissolved laundry compound or long soaking of coloured garments could result in colour damage.

First Aid: Avoid prolonged contact with laundry compound. Wash hands thoroughly with soap and water after use. If swallowed, rinse mouth with water. Do NOT induce vomiting. Immediately seek medical attention. If in eyes, rinse thoroughly with water for several minutes. Continue rinsing with water. If irritation persists, seek medical attention.

Keep out of reach of children

Store G1 in a cool, dry place.

Store your G1 Laundry Compound in the special G1 Container (available from your GNLD Distributor)

G1 Laundry

- Synthetic tensides** - loosen the dirt and do the actual cleaning
- Soap** - works with the synthetic tensides to control the amount of foam
- Builder** - softens water to enhance cleaning effect
- Sodium Sulphate** - controls alkalinity of the cleaning water and prevents wear on the laundry during a cleaning cycle
- Sodium Perborate** - colour-safe oxygen bleach to remove severe spots
- Activator** - helps the sodium perborate to work at low temperatures
- CMC** - prevents loosened dirt from getting re-attached to laundry during a cleaning cycle
- Enzymes** - break down protein and fatty stains
- Optical brighteners** - prevent whites from yellowing and keep colour in those garments treated with optical brighteners during manufacturing
- Sodium Silicate** - prevents corrosion in the washing machine and helps in the cleaning cycle
- Perfume** - helps laundry to smell fresh

Only the Best for Your Wash!
Golden Cares for the Environment

2 Kg

G1 Laundry

G1 contains:
Alkylate Sulphonate, Carboxymethylcellulose (CMC), Ethoxylated Alkylphenol, Optical brighteners, Proteolytic Enzyme, Sodium Perborate, Sodium Silicate, Sodium Sulphate.

G1 Laundry

A good detergent must have many features.

It must be able to wash away a wide variety of different types of dirt from various textiles without causing damage.

It must work well under various conditions - in different types of washing, in a machine or by hand, at different temperatures and in both hard and soft water.

Finally, the washing must not only be clean, it should also look and feel clean; whites should be white and colours clear and pure.

With these challenges in mind, NeoLife has created G1 for you!

For further information on G1 or any other of NeoLife's exclusive home care products, speak to a NeoLife Distributor or contact the Distributor Relations Department on (27 11) 409-3000.
