

PRO VITALITY+

Our Diet Impacts our Health & Vitality

Health surveys show that the incidence of chronic disease is higher than ever before. This may be attributed largely to the state of our diets which can be woefully inadequate in nutrient-rich whole foods. The reality is that most of us get too much of the wrong stuff, not enough of the right stuff!

- 90% of us don't eat the recommended 5-13 servings of fruits and vegetables
- 70% of us admit to eating foods that actually contribute to poor health
- Less than 1 serving of whole grains are consumed on a daily basis - many don't even get that
- Protective lipids and sterols have been stripped from whole grains to increase their shelf life
- Many don't eat fish due to concerns about the presence of heavy metals and contaminants

Whole Food Nutrients Can Optimise Health

- Leading global health authorities like the World Health Organization, Centers for Disease Control, and Heart Associations agree that the key to preventing disease and promoting health is weight management, physical activity and eating a nutrient-rich diet that includes whole grains, fruits & vegetables and fish.
- Everyone should increase consumption of whole grain foods, fruits & vegetables, foods rich in omega-3 fatty acids - and maintain a healthy weight.
- But even those with good intentions to eat a healthy diet face challenges. Busy lifestyles, eating on the run, and the prevalence of processed foods all contribute towards nutritional gaps that would benefit from nutritional supplements.

Our Solution: Pro Vitality+
