

2 Distribution centers set up 30 machines with banding film system and reduced their wrap times by 2 minutes a pallet or 30 hours a day that an operator stands at a machine!

\$171,600 savings in "standing around" labor hours!

Yep. This is a real solution that can't be ignored.

Whether you are a small or large distribution center, one of the most overlooked areas is the wrapping area. Generally companies give more thought to the cost associated with wrapping based on the roll price of the film but there is a much larger picture to consider. The roll price at the end of the day means very little when there are much bigger "carrots" sitting right in front of you. Time is where the big money is spent and this is where the big savings can be found. We have a better process and we will prove it onsite - in your building.
