

Dies with Titanium Nitride coated Resizing Ring

These Hornady Die Sets feature narrow tolerances and reliable workmanship. All parts are made from heat-treated select steel. The Titanium Nitride coating on the pistol case resizing ring makes case lubrication dispensable and reduces friction during the sizing operation. The bullet seating die works with a roll crimp die.

Taper Crimp

For medium revolver loads and pistol cartridges without crimp groove.

Any crimping operation should be done as an additional (fourth) step after bullet seating in order not to damage the bullet.

Calibre	Part No.	Price

Match-Grade Single Full Length Size Dies

This hand-polished die is manufactured to very tight tolerances. The core piece of this neck sizer die is the self-centering neck size bushing (available in .002" increments). Bushings must be ordered separately.

Hornady Neck Size Die „New Dimension™”

Neck sizing with these dies can eliminate problems of excessive head space. The bullet is perfectly aligned with the bore, which leads to better accuracy and longer case life. Should only be used for reloading bolt-action rifle cases. Auto-loading, lever and pump action rifles usually require full-length resizing.

Dies can be used for several calibers having the same bullet diameter and shoulder angle. See chart for details.

Blank Dies

Cowboy Action shooters have a need for dies to load blanks and Hornady's engineers have delivered. They devised a set of dies that allow the loading of blanks for all popular Cowboy Action cartridges, from the .32-20 through the .45-70. These dies are compatible with all 7/8" x 14 TPI presses.
