Diatomaceous Earth Flux-Calcined, Kieselguhr Flux-Calcined PurifiDE® F-12

# SECTION 1: IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY/UNDERTAKING

1.1	Product identifier		
	Product Name	PurifiDE® F-12	
	Trade names	PurifiDE® F-12	
	Chemical Name	Diatomaceous Earth Flux-Calcined, Kieselguhr Flux-Calcined	
	CAS No.	68855-54-9	
		14464-46-1	
	EINECS No.	272-489-0	
		238-455-4	
	Nanoform	The product does not contain nanoparticles	
	REACH Registration No.	01-2119488518-22-0002	
1.2	Recommended use of the chemical and restrictions		
	on use		
	Identified Use(s)	Use as filter aid in industrial settings.	
	Exposure Scenario	No.	Page:
		1 Manufacture of kieselguhr soda ash flux calcined	10
		2 Use as filter aid in industrial settings	13
		3 Industrial, professional and private use of substance or mixtures	16
		containing the substance	
	Uses Advised Against	Anything other than the above.	
1.3	Details of the supplier of the safety data sheet	, ,	
	Manufacturer	EP Minerals, LLC	
		9785 Gateway Drive	
		Reno,	
		Nevada 89521	
		USA

	-	Languages spoken: English, French and German	
		USA: +1-775-824-7600 (08:00- 17:00 PST)	
SECTI	ON 2: HAZARDS IDENTIFICATION		

2.1	Classification of the substance or mixture	This product contains cristobalite (fine fraction) at: < 1% Depending on the type of handling and use (e.g. grinding, drying), airborne fine fraction crystalline silica may be generated. Prolonged and/or massive inhalation of fine fraction crystalline silica dust may cause lung fibrosis, commonly referred to as silicosis. Principal symptoms of silicosis are cough and breathlessness. Occupational exposure to fine fraction crystalline silica dust should be monitored and controlled.
2.1.1	Regulation (EC) No. 1272/2008 (CLP)	Not classified as hazardous for supply/use.
2.2	Label elements	According to Regulation (EC) No. 1272/2008 (CLP)
	Product Name	PurifiDE® F-12

#### Revision: 1.1 Date: 21.03.2024

#### ACCORDING TO EC-REGULATIONS 1907/2006 (REACH), 1272/2008 (CLP) & 2020/878

Diatomaceous Earth Flux-Calcined, Kieselguhr Flux-Calcined PurifiDE® F-12

Other hazards	None
Precautionary Statement(s)	None assigned.
Hazard Statement(s)	None assigned.
Signal Word(s)	None assigned.
Hazard Pictogram(s)	None assigned.
Contains:	Diatomaceous Earth ,Flux-Calcined (Kieselguhr) (< 1% Crystalline Silica– Cristobalite (Respirable Dust))

#### SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS

#### 3.1 Substances

2.3

EC Classification Regulation (EC) No. 1272/2008 (CLP)

Chemical identity of the substance	%W/W	CAS No.	EC No.
Diatomaceous Earth, Flux-Calcined (Kieselguhr)	circa.100	68855-54-9	272-489-0
Contains: Cristobalite (Respirable Dust), <1 Fine Fraction Crystalline silica per SWeRF calculation	< 1	14464-46-1	238-455-4

#### 3.2 Mixtures - Not applicable.

#### SECTION 4: FIRST AID MEASURES

4.1	Description of first aid measures	
	Inhalation	If breathing is difficult, remove victim to fresh air and keep at rest in a position comfortable for breathing. If irritation develops and persists, get medical attention. Blow nose to evacuate dust.
	Skin Contact	Remove clothing and wash thoroughly before use. Wash affected skin with soap and water. If skin irritation or rash occurs: Get medical advice/attention.
	Eye Contact	Flush eyes with water for at least 15 minutes while holding eyelids open. Get medical attention if eye irritation develops or persists.
	Ingestion	Rinse mouth. Give plenty of water to drink. Get medical attention.
4.2	Most important symptoms and effects, both acute and delayed	Prolonged and/or massive exposure to fine fraction crystalline silica-containing dust may cause silicosis, a nodular pulmonary fibrosis caused by deposition in the lungs of fine respirable particles of crystalline silica. Acute inhalation can cause dryness of the nasal passage and lung congestion, coughing and general throat irritation. Chronic inhalation of dust should be avoided. May cause irritation to the respiratory system.
4.3	Indication of any immediate medical attention and special treatment needed	Unlikely to be required but if necessary treat symptomatically. There is no specific antidote. Remove person to fresh air and keep comfortable for breathing.

### **SECTION 5: FIREFIGHTING MEASURES**

#### 5.1 Extinguishing media

5.2

Suitable Extinguishing media

Unsuitable extinguishing media None. Special hazards arising from the substance or mixture Non-flammable, Non-combustible, Not explosive.

Page: 2 of 19

Non-flammable. Extinguish with carbon dioxide, dry chemical, foam or

waterspray. As appropriate for surrounding fire.

#### 5.3 Advice for fire-fighters

Fight fire with normal precautions from a reasonable distance. Fire fighters should wear complete protective clothing including self-contained breathing apparatus.

### SECTION 6: ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures

Ensure adequate ventilation. Avoid generation of dust. Do not breathe dust. Wear appropriate personal protective equipment, avoid direct contact. Where engineering controls are not fitted or inadequate wear suitable respiratory protective equipment.

No special requirements.

6.3 Methods and material for containment and cleaning up

Sweep spilled substances into containers if appropriate moisten first to prevent dusting. Use vacuum equipment for collecting spilt materials, where practicable. Transfer to a container for disposal. See Section: 8, 13

6.4 Reference to other sections

6.2

7.2

#### **SECTION 7: HANDLING AND STORAGE**

Conditions for safe storage, including any

7.1 Precautions for safe handling

Handle packaged products carefully to prevent accidental bursting. If you require advice on safe handling techniques, please contact your supplier or check the Good Practice Guide referred to in section 16. Avoid generation of dust. In case of inadequate ventilation wear respiratory protection.Do not breathe dust. Wear protective gloves/protective clothing/eye protection/face protection. Avoid contact with skin, eyes or clothing. Do not eat, drink or smoke when using this product. Wash hands before breaks and after work. Atmospheric concentrations should be minimised and kept as low as reasonably practicable below the occupational exposure limit.

Stable under normal conditions. Store in a dry place. Keep away from: Hydrofluoric Acid See Section: 1.2

Based upon the available data, the classification criteria are not met. Based upon the available data, the classification criteria are not met. Based upon the available data, the classification criteria are not met.

This product does not contain a substance that has endocrine disrupting properties with respect to humans as no components meets the criteria. Prolonged and/or massive exposure to fine fraction crystalline silica-containing dust may cause silicosis, a nodular pulmonary fibrosis caused by deposition in the lungs of fine respirable particles of crystalline silica. In 1997, IARC (the International Agency for Research on Cancer) concluded that crystalline silica inhaled from occupational sources can cause lung cancer in humans (human carcinogen category 1). However it pointed out that not all industrial circumstances, nor all crystalline silica types, were to be incriminated. (IARC Monographs on the evaluation of the carcinogenic risks of chemicals to humans, Silica, silicates dust and organic fibres, 1997, Vol. 68, IARC, Lyon, France.) In 2009, in the Monographs 100 series, IARC confirmed its classification of Silica Dust, Crystalline, in the form of Quartz and Cristobalite (IARC Monographs, Volume 100C, 2012). In June 2003, SCOEL (the EU Scientific Committee on Occupational Exposure Limits) concluded that the main effect in humans of the inhalation of fine fraction crystalline silica dust is silicosis. "There is sufficient information to conclude that the relative risk of lung cancer is increased in persons with silicosis (and, apparently, not in employees without silicosis exposed to silica dust in guarries and in the ceramic industry). Therefore preventing the onset of silicosis will also reduce the cancer risk..." (SCOEL SUM Doc 94-final, June 2003). So there is a body of evidence supporting the fact that increased cancer risk would be limited to people already suffering from silicosis. Worker protection against silicosis should be assured by respecting the existing regulatory occupational exposure limits and implementing additional risk management measures where required (see section 16 below).

#### SECTION 12: ECOLOGICAL INFORMATION

12.1 12.2 12.3	Toxicity Persistence and degradability Bioaccumulative potential	Not classified as a Marine Pollutant. Not applicable. The product has no potential for bioaccumulation. Some organisms accumulate
12.4 12.5	Mobility in soil Results of PBT and vPvB assessment	Si(OH)4. The product is predicted to have low mobility in soil. This product is an inorganic substance and does not meet the criteria for PBT or
12.6	Endocrine disrupting properties	vPvB in accordance with Annex XIII of REACH. This product does not contain a substance that has endocrine disrupting properties with respect to humans as no components meets the criteria.

### **SECTION 16: OTHER INFORMATION**

The following sections contain revisions or new statements: 14, 15

**References:** Existing Safety Data Sheet (SDS), Existing ECHA registration(s) for Diatomaceous Earth (Kieselguhr), Soda Flux-Calcined (CAS# 68855-54-9).

**Training advice:** Workers must be informed of the presence of crystalline silica and trained in the proper use and handling of this product as required under applicable regulations. A multi-sectoral social dialogue agreement on Workers Health Protection through the Good Handling and Use of Crystalline Silica and Products Containing it was signed on 25 April 2006. This autonomous agreement, which receives the European Commission's financial support, is based on a Good Practices Guide. The requirements of the Agreement came into force on 25 October 2006. The Agreement was published in the Official Journal of the European Union (2006/C 279/02). The text of the Agreement and its annexes, including the Good Practices Guide, are available from http://www.nepsi.eu and provide useful information and guidance for the handling of products containing fine fraction crystalline silica. Literature references are available on request from EUROSIL, the European Association of Industrial Silica Producers.
