2015 COMSEC LLC - CYBER TSCM SURVEY PLANS

When you suspect your organization has been penetrated by illegal eavesdropper(s), hiring a professional TSCM company to perform a comprehensive Cyber TSCM Survey is your best course of action!

ComSec LLC's experts provide professional Cyber TSCM Surveys utilizing proprietary equipment and proven eavesdropping detection methods. Our surveys include both traditional TSCM detection methods and Cyber TSCM eavesdropping detection methods to ensure an all-inclusive solution. And, we offer overt or covert surveys depending on the needs of your organization. Our Cyber TSCM Survey solutions provide options to meet customer needs, while ensuring the consistency and effectiveness of our services.

ComSec's Cyber TSCM Surveys consist of a thorough electronic and physical examination of the selected areas to detect unauthorized audio, optical and cyber eavesdropping threats (e.g. GSM, 3g & 4g cellular eavesdropping devices, wireless transmitters, wire & mic tap, telephone compromise tap, carrier current bug, micro wireless video device, laser or infrared eavesdropping device, etc.)

Our **"Covert" Cyber TSCM Surveys** are an unobtrusive Cyber TSCM solution that won't disrupt your workplace routine, or alert your staff to a potential eavesdropping threat. All instrumentation and survey activities remain inconspicuous during the survey. In fact, our covert survey activities resemble a LAN/Wi-Fi audit or cellular RF mapping session.

Choose an option below that meets your survey area needs, and choose either an overt or covert method.
