

ALICE Receptionist

CAMPUS BUILDINGS

MANAGE MANY BUILDING
ENTRANCES FROM A SINGLE
LOCATION.

ALICE KIOSK ALLOWS VISITORS TO
SPEAK WITH A LIVE RECEPTIONIST OR
SECURITY PERSON.

PROVIDE VISITORS ACCESS TO LIVE
HELP AT LOCATIONS THROUGHOUT A
CAMPUS WITH ONLY A FEW
EMPLOYEES.

- ✓ Corporate Building Campus
- ✓ Universities and Colleges
- ✓ Government Building Campus
- ✓ Medical Offices Campus

ALICE INFORMATION & SECURITY KIOSK

Campus environments that include a collection of buildings have a common problem; providing visitors to those buildings, access and information about the building they are at. Staffing each building with a security or information person is costly and not an efficient use of resources. ALICE is a technology system that enables your staff to solve this problem by providing these key features:

- Kiosk units that can be placed at strategic locations around the campus
- 2-way video communication between staff and visitors using the kiosks
- Visitor can initiate a call to a remote receptionist by touching the screen on the kiosk (Self-Service Mode)
- Built-in motion detection camera notifies a remote receptionist of the visitors presence and allows receptionist to initiate a call with visitor (Operator Mode)
- Visitors from many different buildings can now be managed by only a few staff members.

ALICE™ Receptionist

ALICE – A NEW WAY TO INTERACT

There are many information kiosk solutions on the market today. Most of these simply provide self-service information for visitors. Most of these are best suited for providing way-finding maps to help visitors get from one location to the next. When it comes to providing building access control or answering specific questions by the visitor there have not been many options. Until ALICE

ALICE is a different kind of kiosk. Unlike most kiosk solutions, ALICE is designed to extend human interactions not eliminate them. ALICE enables your staff to be more productive by giving them the tools to interact with more people in more locations from the convenience of their desk. Using the ALICE client software on their PC, employees are able to connect with any number of ALICE kiosks located throughout a building or buildings to interact with visitors. By having this live person to person interaction, staff members can provide better building access control as well as provide a better experience to visitors.

EXAMPLES OF ALICE IN CAMPUS ENVIRONMENTS

VISITOR INFORMATION

Providing information and help visitors, is a staff intensive and costly service. Utilizing ALICE kiosks placed at strategic locations throughout a building, a small number of information desk clerks can serve many people across a broad number of locations at a fraction of the cost of staffing each location.

SECURED ACCESS TO BUILDINGS

ALICE provides a high-tech solution that allows security to visually verify a visitor's credentials prior to granting the visitor access to the building. The security staff member can stay in a secured part of the building and communicate with the visitor in the holding area via 2-way video to validate credentials. This provides the highest level of security as no employee is ever exposed to individuals who have not been cleared.
