

ACCESSIBLE SIENNA

With BraunAbility and Vantage Mobility International (VMI)

Toyota's authorized conversion companies, BraunAbility and Vantage Mobility International (VMI), are pleased to offer wheelchair accessible conversions for the all-new 2021 Toyota Sienna.

Available first quarter, 2021, these vans will be sold through a network of BraunAbility and VMI mobility dealers. Toyota dealerships can take care of their customers with mobility challenges by directing them to BraunAbility and/or VMI through Toyota's internal referral system. These solutions can be adapted to meet the specific needs of the customer. For example, customers with walking disabilities who don't need a wheelchair accessible solution may appreciate a power, rotating, lift-up seat which will now be available through BraunAbility dealers for installation in any of the first two row seating locations (driver, front passenger, rear passenger positions).

We at Toyota are proud to support efforts to provide mobility for all.

The BraunAbility and VMI partnership also means expanded feature availability, including installations of lift-up seats.

Vehicles with mobility services' adaptive equipment are modified by a third party. Those modifications may affect fuel economy, driving performance, durability, and the safety of the vehicle. They may also affect the performance of Toyota Safety Sense and may affect the new vehicle limited warranty.
