

**The Book Creator Car by Thomas
(age 7)**

In the future, when people drive car on the street, the vehicle will collect leaves from trees at the same time. Leaves will be processed under a special program in the vehicle and turned out to be different categories of books. Those books will be delivered to schools libraries for kids to read.

**Toyota Water Car by Delphine
(age 7)**

This is a car that glides over the water it produces. It is eco-friendly and good for animals because it gives them water to drink, dampens the soil and makes trees grow. Even earthworms can take a shower in its exhaust!

Snowflake Car by Diyaana
(age 7)

Diyaana has drawn a "Snowflake Car" which facilitates people during winter in 6 ways such as 1. shows accurate weather, 2. gives snow activity accessories (snow shoes, snow boards, etc.), 3. gives vitamin D drops because there is not direct exposure to the sun during winter, 4. helps in snow shoveling, 5. gives gifts to children during winter holidays, and finally 6. helps farmers to bury vegetables in deep winter.

Clean Air for Everyone! by Will
(age 9)

This majestic vehicle soars over the sky searching for greenhouse gases or unclean air. It sucks in the unclean air and purifies it through a series of pipes. After all of that, clean air will come out of the big openings and there will be crisp, fresh and clean air for everyone!

Eco-Drive by Ji An
(age 10)

Dino's dream car can help those suffering from heavy pollution. The car purifies contaminated soil, air and water. This way, more people and animals can live long and happy lives again.

**The Universal Aid Car by Aileen
(age 11)**

In the world there are about 59.5 million refugees, homeless, helpless and hurting, to add to that number we have others - orphans, slaves and mistreated people. They need aid and food and so much more! My Universal Aid Car would help the refugees, and others and give them a place to live. I think we should step up and help someone - after all, we live in the same world under the same stars.

Window to the Past - Toyota Time Traveler by YingJie
(age 13)

My dream has been to witness historical events in person. Therefore, I invented the Toyota Time Traveler, the car with a literal window to the past. Imagine yourself travelling beneath the sea, in front of you the monstrous wreck of the Titanic. With an easy flip of a switch, your frontal panoramic window immediately travels back in time to view the actual ship. Indeed, you can view the Titanic in its full glory before its tragic demise. Or perhaps you are visiting the National Dinosaur Museum in Australia and you in awe of the reconstructed skeleton of a Tyrannosaurus-Rex. Just press the "History Button" on the dashboard of your Toyota Time Traveler and instantly watch this ferocious dinosaur come to life. Witness the T-Rex as it actually was when it was alive, but through the safety of the Time Traveler. In addition, by touching the "Information Screen", a running message will provide details on this creature of the past.

Toyota Cares by Rachelle
(age 15)

As the world is becoming more disaster-prone in this day and age, the task is imminent that an effective and efficient rescue-mobile be invented to save the lives of those being inflicted by earth-quakes, hurricanes, wars and other emergency situations. To this end I have created a multi-functional mobile shelter called Toyota Cares which embodies all the necessary tools, equipment, nourishment, and medical supplies to address the needs of the victims. It is realistically an all-in-one relief station designed to provide immediate haven for the suffered and displaced. Besides, the vehicle was constructed using mostly recyclable materials which are environmentally friendly and sustainable.

Light of Hope by Yoon
(age 15)

My dream car sends light and power wireless to many places and countries in need of it. Due to the car giving off power, it lights up the streets for people to walk at night, gives power to create fire for cooking. Also it gives power for water fountains to pour out drinkable and clean water. The light that my car pours out in the air can fill up the dark night sky for people to walk in the streets late at night without any trouble of being unable to see in the dark. It lets the children in developing countries to read and learn wherever and whenever they wish to. It can reach anywhere around the world because the power that the car gives off can be transported wirelessly. My car can be helpful to many people in all the countries. By driving past the places in need for help, it lights up people's lives, and can give them hope.
