

CARBON ACCOUNTING SOLUTIONS

The Ecova Carbon Accounting solution, Carbon Manager, helps you understand your energy usage and how that translates into carbon emissions—and the size of your footprint. Carbon Manager makes it simple to manage all of your domestic and international emission activities and mitigation project management efforts in the context of your corporate goals, all on one platform. This allows you to confidently identify, reduce and report emissions to your stakeholders.

Our comprehensive solution doesn't end with the data. Our team takes this information and provides business solutions, and develops and implements sustainable strategies. These strategies will help you to use fewer resources, reduce your emissions and report on data-driven results.

CARBON MANAGER

Carbon Manager is hosted on an integrated reporting platform enabling easy access to your data for accurate and cost-effective carbon accounting. At the most basic level, Ecova's Carbon Manager provides your organization with accurate, web-based carbon emissions reporting using globally accepted methodologies and greenhouse gas (GHG) emission factors. With this insight, Ecova can help you understand your organizational impact.

Global and national awareness of climate change is on the rise. Businesses are being pressed to calculate their carbon emissions in response to numerous and varied carbon regulations. In addition, investors seeking to understand the potential risk and opportunities of their investments are requesting carbon emissions and carbon management information from companies. Similarly, consumers are increasingly focusing on the commitments and actions companies are taking to document, disclose, and mitigate their carbon impact. Are you prepared to respond?

CARBON MANAGER FEATURES:

- Web-based reporting and tracking of carbon emissions for utility and fuel invoices
- Emissions calculations based on globally accepted methodologies and emission factors
- Trends and carbon-intensity reporting
- Easy process to upload consumption activity for additional emission activities
- Establish and monitor baselines, goals and targets down to the site-level
- Forecasting and scenario modeling tools
- Management tools to track the efficacy of carbon reduction projects, and the impacts of your carbon offsets and renewable energy purchases
- Integrated reporting tools allowing for ease in disclosure to external entities
- Semi-annual newsletter highlighting your organization's carbon trends and industry-specific best practices
- Training and consulting from our Carbon Accounting & Advisory Solutions team

CARBON MANAGER PLUS FEATURES:

Carbon Manager PLUS includes all the Carbon Manager features in addition to these advisory solutions:

- Full partnership with our Carbon Accounting & Advisory Solutions team through the entire process
- Development and oversight of inventory management plans
- Robust modeling of all energy consumption and emission data gaps within the organizational boundary
- Comprehensive annual GHG Report provided for internal reports or push externally to voluntary agencies and stakeholders

SEE MORE

Gain broad visibility into overall energy consumption and the resulting carbon emissions to enable data-driven decisions about your sustainability programs.

SAVE MORE

Reduce your business expenses and reduce legislative risks by measuring and evaluating carbon accounting.

SUSTAIN MORE

Build lasting brand equity and enhance your reputation through accurate and verifiable carbon accounting.
