Opatch X64 [Updated]

Stop All "Warm" Updates Windows 8, Windows 7 & Windows Server 2008R2 No more reboots after "hot" updates - Ever! Keep your Server up to date! Instantly patches and updates installed, scheduled and automatic updates are backed up in the cloud. Install or remove any patch with one click This "hot" patch tool will only patch security vulnerabilities, not apply updates for new operating system releases. No-Hassle Management of your updates. You don't have to reboot or shut down your server for the updates, nor do you have to disable updates on your client computers. Zero-Downtime patches every 30 minutes. Zero-Downtime... 100% of the time. Disconnect, reboot, disconnect and reconnect to the internet - No downtime for the server. Extremely Fast Instant updates - No downtime, no reboots! Run without user intervention - No activation, no other user intervention required. Automatic updates The tool installs and updates patches for you. Access your patches with your own browser or from anywhere. Never miss a patch. Automatic updates are logged and stored for future patching of the same vulnerability Scheduled patching Zero-Downtime, patch and update schedule. Access the scheduled patching from anywhere. Macro can be triggered to open the Open menu. 35. Macro 1d6a3396d6

----- Installs a small daemon on your system which watches for new security updates to your applications. Once you get notification, the update is downloaded and applied to your system. How It Works: ----- Oday tries to fix security issues of the applications that you install on your system without your intervention. These issues are disclosed by the security teams of companies or individuals who discover vulnerabilities and issues on their own. Once you get notification about new security issues, you can download the updates yourself. You don't need to worry about rebooting your system, because the application provides a mechanism to avoid that. Additionally, it works automatically without your intervention to stop all of the patches for your system. You have the flexibility to pick and choose those patches that you are interested in. Supported Operating Systems: ----- - Windows XP, Vista, 7, 8, 8.1, 10 - Mac OS X 10.4.11 - 10.9.3 Supported Security Versions: ----- - Latest stable (Testing) - 12 Supported Application Versions: ----- - Windows XP (SP3+) - Windows Vista (SP1+), Windows 7 (SP1), Windows 8 (SP1+), Windows 8.1 (SP1+), Windows 10 (SP0) - macOS 10.4.11 - 10.9.3 Supported Plug-ins: ----- - Java JRE 7 Update 51, Java JRE 8 Update 45 Supported Languages: ----- - English (Global) - Spanish (Spanish) Supported JavaScript Vars: ----- - nsParticularPatchInfo, nsPatchingInfo, nsPatchingStatus What's New: ----- Version 1.5.0 - Reverted Windows XP support due to its lack of availability for download - Improved Google Chrome compatibility Version 1.4.0 - Improved support for Mac OS X Version 1.3.0 - Improved Java JRE support Version 1.2.3 - Fixed an issue related to the automatic updates of each individual application's security issues Version 1.2.2 - Fixed an issue related to the automatic updates of each individual application's security issues Version 1.2.1 - Fixed an issue related to the automatic updates of each individual application's security issues Version 1.2 - Fixed an issue related to the automatic updates of each individual application's

What's New in the 0patch?

Zer0 is a free, easy to use, easy to install, and easy to manage zero-day patching software for Windows. Designed to check your Windows system for potential security issues (holes), Zer0 identifies and reports any issues in the background, and applies any security fixes available. Zer0 checks for many security issues that are overlooked by users and anti-virus applications, including: * Zero-day vulnerabilities, such as exploits for previously unknown bugs in Windows operating systems. * Previously unknown software updates, patches, and hotfixes for software that has previously been released. * Suppressed errors in programs, which can help to avoid "silent" issues * Problematically active programs and those that haven't been updated since they were released * Classified programs and those running with superuser permissions. Zer0 is free to use and available for Windows 7 or newer. Please read our User Agreement before you use Zer0. Benefits: 0patch is an all-in-one Windows 0day patching software, which includes a comprehensive background check to check for any potential security holes on your PC. Zer0 is free to use, but Zer0 makes it possible for you to purchase pre-patched and fully tested patches. Zer0 automatically updates your system with the latest patched versions to ensure you always have the latest security fixes. What's New: Added new detector option to automatically detect and determine the updates available for your operating system. Added new option to temporarily disable all the installed patches. Added option to exclude applications from being patched. Added option to exclude all the installed programs from being patched. Added option to exclude all the executable files from being patched. Added new options to disable the background check. Added new options to perform a manual fix or disable the current running process. Added new options to skip the "Technical details" dialog box. Added new options to delete the log file after patching. Added new options to show the full names of the installed patches. Added new options to automatically sync with latest ZP patches. Added new option to refresh the patch list after a manual fix. Added new option to automatically detect updates for the updated executable files. Bug Fixes: Fixed scanning incomplete when the installer encounters a computer crash. Fixed scanning not completed when the installer encounters a file corruption issue. Fixed scanning failed when the installer encounters a problem in saving the patch information to disk. Fixed patching fail due to a corrupted INI file. Fixed option to exclude a currently running process. Fixed option to exclude a currently running program. Fixed scanning fail when the installer encounters a file corruption issue. Fixed scanning fail when the installer encounters a problem in saving the patch information to disk. Fixed scanning not completed when the installer encounters a problem in saving the patch information to disk.

System Requirements For 0patch:

Requires Xbox Live Gold and Windows 10. Your ability to experience The Division in full is based on your PC hardware. The minimum system requirements are based on our current best guess at what hardware would be needed to play The Division at a particular graphics settings. This is a recommended specification and should give you a good experience. For details, see our official recommended specifications here. Minimum specifications: OS: Windows 7 or higher Processor: Intel Core i3 2100 (2.1 GHz) or better RAM: 4 GB Video card
