Image: Dave Barry The '4D' in CAD Drawings, models, animations, and simulations all have four key stages of development.

They are plan, section, detail, and dimension. You have to enter your 4D model information (plan, section, detail and dimension) into the drawings in order to create your 3D model. The first three stages are the digital tools and software used to create a 3D drawing. The last stage is the physical creation of your drawing (perhaps in plastic or metal) with some kind of physical software. Plan Figure 1: The first thing a beginner in a CAD environment must do is understand how to plan (create a drawing with dimensions) using standard input methods. 1. The plan stage is where you draw the basic shapes and dimensions of your drawing on the plane, or base, or on a drawing surface (top, floor, paper, etc.). To do this you must first draw a reference line (which can be an imaginary line as well as a drawn line) and then a number of other objects like straight lines, circles, squares, trapezoids, parallelograms, ellipses, and polylines. The shapes you draw are called objects. You may find it easier to first sketch (draw in freehand) the basic objects and use those as guides for plan drawing in a CAD program. For example, when you start AutoCAD or other CAD software, you'll typically see a selection of standard plan objects already there. The 'Plan' command in a CAD program displays the list of these objects. 2. You can use AutoCAD's Plan, Section, Detail, and Dimension commands to create a drawing that accurately shows what your physical space looks like (Figure 1). The Plan command is used to create a two-dimensional plan drawing from a set of objects. The Section command is used to create a plan drawing of a section of a three-dimensional space (which may be a wall, floor, or ceiling). The Detail command is used to create a plan drawing that shows a section of a three-dimensional space. The Dimension command is used to create a plan drawing that shows the cross sections of an object that have been sliced in one dimension. If you want to use the drawing surface, you'll have to select the 'Viewpoint' tool (a geometric eye symbol in the toolbar) before you start to plan. Section Figure 2

Autodesk Exchange Apps Autodesk Exchange Apps is a web service that provides applications that can be used on mobile devices, desktops and the web. Autodesk Exchange Apps takes advantage of the flexibility of the web and the familiar features of AutoCAD software, so users can do their AutoCAD work on any device. A user can use a mobile device as a remote control

and do collaborative drawing on the go. They can collaborate on the drawing on any device using a browser, which eliminates the need for a network or a specific device. With the release of AutoCAD 2012, the Exchange Apps store is now integrated into AutoCAD and contains over 1500 applications for AutoCAD and other Autodesk software. Autodesk Exchange Apps store is not the same as the AutoCAD Exchange store. The Exchange Apps store is available on the web and to AutoCAD users, while the AutoCAD Exchange store is available only to users of the AutoCAD software. In digital communication systems, including multimedia systems and the Internet, data are typically transmitted over a communication channel, or medium. The communication channel may be wired or wireless, and may be a physical medium, such as a wire, a wireless network, or a single optical fiber, or a combination of physical media. Data are typically transmitted in discrete packets. The packets contain data, or payload, and often also contain a header, or control, data that is used to control how the data in the packet are processed. A protocol stack is a set of processes that communicate with each other over a communications link. Many communications protocols are layered on top of one another. For example, Transmission Control Protocol (TCP) is layered on top of the Internet Protocol (IP), which is layered on top of the physical media or physical layer. Each layer in the protocol stack has a defined function. The protocol
