

I have a mid 2009 MacBook Pro and a late 2009 iMac. Both machines have Maverick installed. I want to install Windows using Boot Camp, . But have not been able to do so using the utility from Microsofi's website. How can I install Windows on both my machines? I want to install Windows on both my machines and use both operating systems. I can only use one operating system on the machine. I know there is a way, but I want to know if it is possible. I have tried it, but I have only been able to use it to install Windows on one machine. I have also used Windows XP on both machines, but it worked on one and not on the other.
