Numerology software by Decoz, all your personal and business data in a single, easy-to-use interface.. (Provided By Google) Explanation of the Roman Numerals 1-10. I give you some explanations of the Roman numerals 1-10. Numerology Software. Numerology Software. Numerology Software by Decoz; FREE trial and 30 day money back guarantee. Ruth Decoz (WISD)Q: How to change the current document version in Sharepoint using API I am creating a SharePoint list item using C# and trying to change the current document version in this list item. According to documentation : BizTalkApplicationContext context = new BizTalkApplicationContext(BizTalkEnvironment.Local); BizTalkDocumentVersion targetDoc = context.Documents.Get(documentId); //Name the target document version targetDoc.DocumentVersion.Name = "New version"; //Save the target document version targetDoc.DocumentVersion.Save(); //Manually delete the original document version context.Documents.Delete(documentId); But When I am trying to Save targetDoc.DocumentVersion.Save(); it throws me an exception saying "The first time you attempt to save, this action must be performed in the context of an open document". And if I understand correctly, if I am trying to access the versioned document as it is not open then it will not have any versions. So I am trying to call context.Documents.Open(documentId) before doing the Save(), so I can get the document in a current version. But, when I try to call context.Documents.Open(documentId) I am getting error : Exception: Request failed. Message: There is no object of the given type registered for the given URL. StackTrace: at Microsoft.Office.Server.UserProfiles.UserProfileManager.PutOnline(String userName, String profileUrl, ProfileVersion version, Boolean checkForExistingProfile, String profileUrlRedirect) at Microsoft.SharePoint.SPUserProfileManager.Profile(String userName, String profileUrl, ProfileVersion version) at Microsoft.SharePoint.SPUserProfileManager.GetProfile(String userName, String profileUrl) at Microsoft.SharePoint.SPDocumentManager.GetSiteUserProfile(Web site
